

# HEADER MOCKUP KIT

GPHeaders mockup kit allows you to design a set of truly custom headers without the vehicle ever leaving your location. We supply our customers with mockup header flanges and collectors along with our adjustable aluminum mockup elbows allowing you to design any header imaginable. These mockup header components are sized for PVC tubing which are used to easily and quickly connect the bends of the header.

At GPHeaders, we believe in serving our customers the best products possible at a reasonable price. Our mandrel bends are created from American made ASTM A269 304 Stainless tubing. From there we use a combination of in-house bending and aircraft bending manufacturers for our mandrel bending. Most off the shelf headers are made with 1/4" or 5/16" thick flanges which lead to warping and header flange sealing issues. Our flanges are CNC laser cut from 3/8" and 1/2" thick material. After they are laser cut, they are trued up in-house. This keeps our header flange cost to under half of the cost of having a CNC machined flange done. As with all of our header fabrication, our collectors are built in-house. We offer custom headers built with weld-on-formed collectors, slip-on-merge collectors and double-slip-merge collectors for turbo applications. Since all of our merge collectors are built in house, we have complete control, assuring they are built to your exact specs.

## CUSTOM HEADER PRICING

	4 Cylinder	6 Cylinder	8 Cylinder
Mild Steel	\$900	\$1350	\$1800
Stainless Steel	\$1100	\$1650	\$2200

## Private Labeling

GPHeaders, Inc. unique custom header manufacturing techniques have allowed us to supply customers with industry leading products in quantities from one to one hundred. We do not cut corners on any of our projects and depending on your end goal for your products we are able to use the same high quality components in all of our private label headers as we do with our custom one-off headers. Our unique manufacturing process, mandrel bending and jig building for repeatable results has made us a great choice for customers looking for a manufacturer to take on their next private label or short run production header project. Repeatable results and fitment every time is what we are after.

## Dragster Headers

- Zoomies starting at \$1200
- Down swept Mild Steel \$1600
- Down swept Stainless \$1900
- Ceramic coating \$250
- High polish finish \$300

## Turbo Headers

- Turbo inlet elbows \$150-250
- Weld on collector \$1150
- Double slip merge collector \$1475
- V-Band outlet \$100

## Pulling Truck Headers

- Stainless steel \$1800
- High polish finish \$300
- Megaphone outlet \$100
- No charge for stepped primaries
- Tube size up to 2.75"
