

HALTECH Highlights the Versatility of the uC-10 in Latest EPARTRADE Tech Webinar

In an engaging and informative session presented as part of EPARTRADE's *Race Industry Now* weekly tech webinar series, HALTECH's Special Projects Manager, Andrew DiMartino, joined host Joe Castello of WFO Radio to spotlight the groundbreaking versatility of the HALTECH uC-10, a powerful engine control unit designed to bring adaptability, performance, and color-coded clarity to today's high-tech motorsports environment.

The webinar, titled "*Clear and Colorful: Exploring the Versatility of the uC-10*," delved into how the uC-10's compact yet advanced platform meets the demanding needs of tuners, racers, and builders across various disciplines. Known for its intuitive interface, customizable configurations, and wide application range—from grassroots motorsports to high-level competition—the uC-10 has become a staple for modern engine management.

"It's all about giving users the tools they need to do more, faster, and with more precision," said DiMartino during the webinar. "With the uC-10, you're getting a fully featured ECU that doesn't compromise on performance, but still offers the flexibility and ease of use that customers expect from HALTECH."

The session also highlighted:

- The color-coded wiring system that simplifies installation and troubleshooting
- The uC-10's ability to manage complex fuel and ignition strategies
- Real-world applications and examples from HALTECH's customer base
- Integration with HALTECH's NSP software for advanced tuning

Audience members actively engaged through the live chat, submitting questions that led to deeper discussions about the ECU's data logging capabilities, compatibility with other HALTECH hardware, and its suitability for everything from track day cars to professional racing applications.

The webinar is now available to watch on EPARTRADE's YouTube channel, where hundreds of other technical sessions are archived for industry professionals and enthusiasts alike.

About HALTECH

HALTECH has been a global leader in engine management systems for more than 35 years, offering innovative solutions that empower racers and tuners to push performance boundaries with confidence.

About EPARTRADE

EPARTRADE is the premier B2B platform for the global racing industry, providing year-round

connectivity between suppliers and buyers. With its live webinars, daily newsletters, and Race Industry Week, EPARTRADE continues to lead the charge in racing technology dissemination.
