

**TAKE PISTON DURABILITY  
TO THE NEXT LEVEL**

**Protect Your Power-Adder Build with  
Wiseco's Ceramic  
Crown Coating**

In the never-ending hunt for more horsepower, compression is increasing, boost is going up, and more nitrous is being sprayed. From street to strip or anywhere in between, you want to get the most out of your engine, but these high-power builds can create extremely high cylinder pressures and internal temperatures, straining even the toughest components. Protecting pistons should be a priority, which is why Wiseco is proud to offer its Ceramic Crown Coating, adding an extra layer of insurance against pressure, heat, and other potentially damaging engine conditions.

- Ceramic-based coating formulated and applied in-house to reflect heat back into the combustion chamber, reducing temperatures translated into piston, wrist pin, and rod small end
- Resists carbon accumulation on piston crown to help maintain consistent combustion efficiency
- High-value option to promote piston and engine durability, efficiency, and horsepower
- Can be added to a wide variety of custom piston types, from sport compact to domestic, and is compatible with other custom features such as gas ports

**Achieve maximum durability and power -  
Add Ceramic Crown Coating to your next set of pistons!**

Pricing starting at \$35.00 per piston
