

SERVICE & OVERHAUL

RACING & PERFORMANCE

Brendan Murry, Nostalgia Top Fuel

Six world championships, 62 wins, two-time Indy winner, 1998 California Hot Rod Reunion winner. Nitronic Research 5 Second Club, Good Guys Rod & Custom 5 Second Club.

AJPE/TFX 396" Fuel Hemi, sealed by SCE Gaskets for over 10 years.

Tim Wilkerson, NHRA Fuel Funny Car

Tim began racing his Fuel Coupe' in 1996, since that time he's amassed 17 Event wins and multiple top ten championship seasons. One of the few Owner-Tuner-Drivers in the NHRA Fuel ranks he knows exactly what he needs to win. Dependable parts. Tim uses SCE Gaskets.

Terry & Lori McCarl, TMAC Motorsports #24 World of Outlaws Sprint Car

44 wins in the National World of Outlaws Series since 2008, seven-time Knoxville champion, seven-time Husets Speedway champion, World Series Sprintcar winner, Warnambool, Victoria, Australia.

900 Horsepower, 410ci Chevrolet on methanol, sealed by SCE Gaskets.

On the Cover: Clint Hairston on a sub-6-second pass in his Pro Street GTO powered by a Duttweiler 3000hp 396" Twin Turbo Small Block, sealed by SCE Gaskets.

Engine Master Gasket Sets

For Service & Overhaul

SCE's new Engine Master kit sets feature Made in USA gaskets and components. You can rest easy, knowing you have all the gaskets and seals for the job, with the savings and convenience of a full gasket set!

Precision-Molded Carb Gaskets

Molded metering block and float bowl gaskets for Holley style carburetors
 — Part number listing on page 69 —

Technology Meets Carburetor Gaskets

- Jetting changes just got quicker & easier
- Super-tough molded gaskets
- Won't tear or stick
- Eliminates scraping
- Completely reusable

- Precision fuel and air passages for better consistency.
- Non-stick thermoplastic material resistant to all motor fuels, racing fuels and additives common to racing.
- Will not shrink, so float bowl screws stay tight.
- Strong, tear-proof and reusable.

**MADE in the USA
 by SCE GASKETS**

WON'T SHRINK • WON'T STICK • WON'T TEAR

Superior Technology Delivers Performance Under Pressure

Coolant and Oil Seals on Titan and ICS Titan™ Head Gaskets

Patented coolant and oil seals are designed to work with minimal clamp load. As seen in the section view, these seals are offset rather than stacked to accomplish two important objectives. First, the compressive load of tightening head bolts forces the seals toward the center of the annealed gasket body to form containment channels which help prevent seal blowout. Second, fully compressed coolant and oil seals lie in a single plane with the gasket body, thereby "tripping" additional clamp load to the combustion seal, allowing for increased cylinder sealing. This is true of both Titan and ICS Titan head gaskets.

ICS Titan™

Built-in combustion seals block lateral flow of combustion pressure.

Images show wire o-ring primary seal and self-energizing secondary combustion pressure seal.

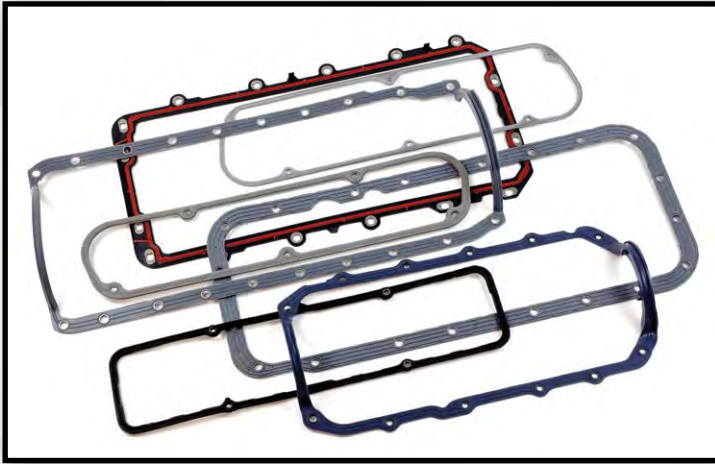

Combustion Seals on ICS Titan Head Gaskets

Patented Integral Combustion Seals found only on ICS Titan head gaskets take the place of o-ringed blocks or heads, with an added benefit. The illustration shows how the solid gasket body is separated for insertion of a stainless o-ring wire. Primary combustion sealing is achieved by load concentration from the inserted wire, as in the case of an o-ringed block. In addition, the upper and lower flanges of the ICS combustion seal remain open toward the cylinder, allowing the pressure of combustion to force them against the block and head. Extreme cylinder pressure can cause the head to lift; in this case, the upper and lower flanges of the ICS seal follow the head and block, providing an additional, secondary combustion gas seal. Best of all, there is *no machining required!*

Molded Rubber Oil Pan & Valve Cover Gaskets

SCE Gaskets offers state of the art molded silicone rubber gaskets for all popular oil pan and valve cover applications. These gaskets offer one-piece construction to eliminate frustrating leaks at the four corners of the oil pan, and they're re-usable! SCE one-piece pan and valve cover gaskets are constructed of the highest grade silicone rubber to resist heat damage and seal irregularities in the sealing surfaces. Each gasket has built-in crush limiters to prevent damage from over-tightening.

FIND PAN GASKETS HERE in Short Block Gaskets and Seals at the beginning of each engine section.

Performance Head Gaskets

for AMC, Chrysler, Ford & GM Muscle Cars

SCE Pro Seal composite head gaskets are the ideal solution for the performance aftermarket. Strong and easy to use, SCE performance head gaskets are manufactured with the right combination of materials and features for easy and dependable use on real-world, high compression, street/strip power plants.

FEATURES

- Compressible body construction
- Self - Sealing coating
- Silicone Bead Seals (where required)
- Extra Thick Fire Rings

BENEFITS

- Accepts Standard Surface Finish
- No need for additional sealants and no leaks
- Enhanced coolant sealing
- Stronger Combustion Seal

Embossed Steel Shim Head Gaskets

SCE re-introduces classic steel shim head gaskets for high compression use. Stock Eliminator and Super Stock class rules do not allow machining to install o-rings for copper head gaskets. Consequently, racers in these classes use steel shim head gaskets for strength and to 'pump up' their compression ratios. Over the last several years embossed steel shim head gaskets have been hard to find, until now. Super thin, super strong OEM style shim steel head gaskets are once again available for select performance applications.

FIND THEM HERE near the end of each engine section.

SCE Makes the Widest Range of Head Gaskets

From 8,000 horsepower fuel-burning Hemi's to Model "A" Fords, we've got it sealed.

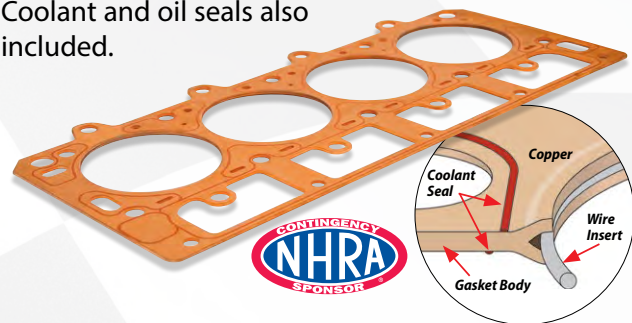

PRO COPPER

Not all solid copper gaskets are created equal. SCE uses premium 99% pure copper sheets that are precisely rolled to our specifications (choice of 10 different thicknesses) and tested for uniform flatness to assure precise cylinder head-to-block alignment and eliminate uneven loading. After processing, each gasket is annealed to ensure optimum mating and provide measurable gains in cylinder sealing, as evidenced by lower leak-down percentages. O-ringing recommended.

ICS TITAN

Patented Integral Combustion Seals perform the function of O-ringed blocks and heads without the added machining costs. They also provide extra sealing in high combustion pressure environments where rules prohibit O-ringing. The ICS Titan features stainless steel O-ring wire inserted into the gasket body around the cylinder bore, with combustion pressure forcing the flanges against the head and block for a secondary seal. Coolant and oil seals also included.

TITAN

SCE takes solid copper gaskets to the next level by adding patented coolant and oil seals to provide effective containment channels with a minimal clamping load. They are on both sides of the gasket and offset so that when compressed they lie in a single plane with the gasket body thereby "tripping" additional clamp load to the combustion seal, allowing for increased cylinder sealing. Titan gaskets are also available in 9 popular thicknesses.

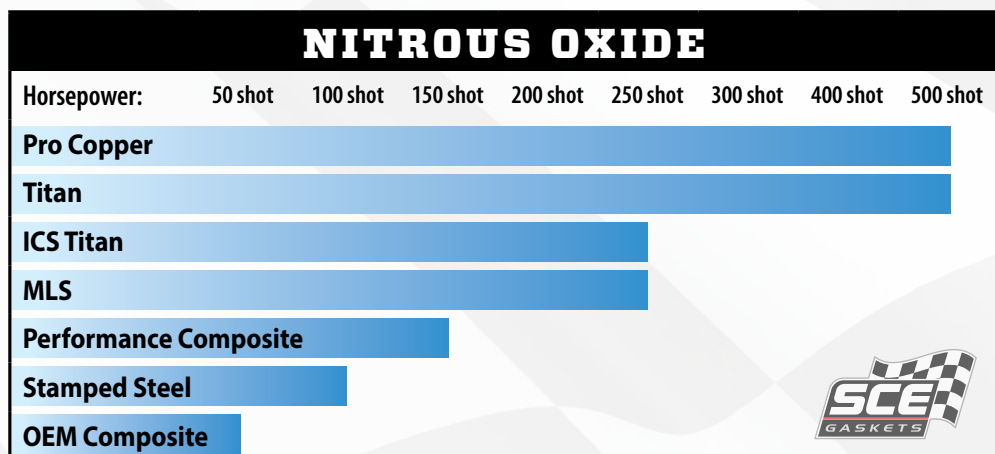

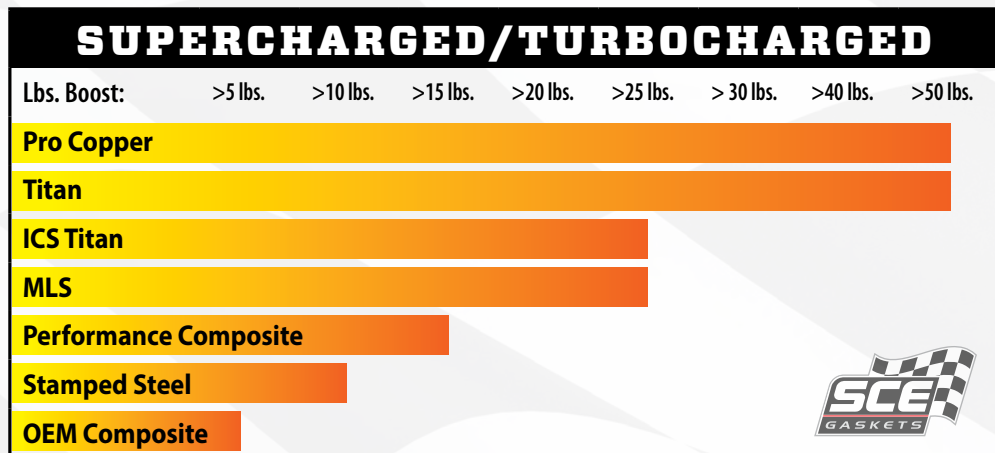

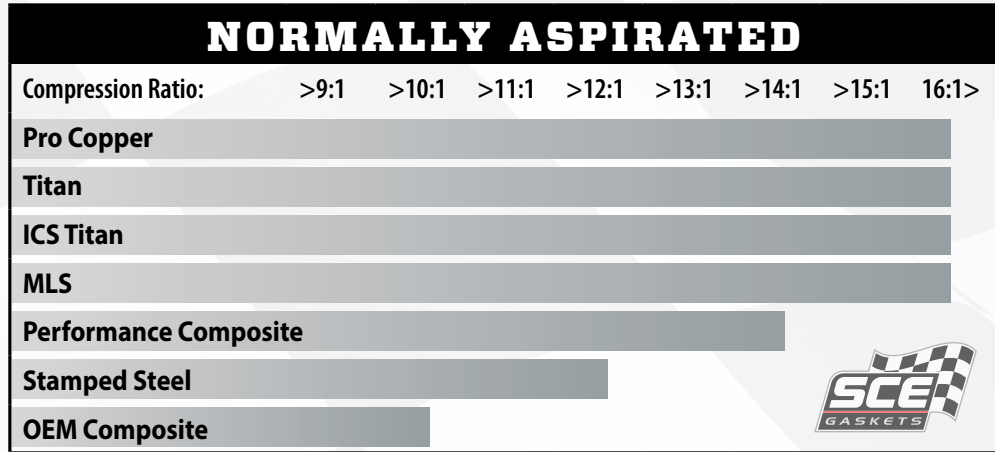

PRO SEAL COMPOSITE

Here's an effective solution for excellent sealing in high performance street and mild competition applications. SCE's unique Pro Seal composite gaskets feature only three elements: a cold rolled steel core with pure graphite facing attached to both sides, plus an extra thick steel fire ring armor. It's a purely compressible gasket that can handle up to 15 lbs. of boost or a 150-shot of nitrous, but won't damage aluminum heads like competitive designs with O-rings.

Recommended Applications

for Various Head Gaskets

Note: These graphs will provide a baseline indication as to which type of head gaskets should be employed in various applications. Actual limits are the responsibility of the builder, given various factors that can influence gasket performance, such as camshaft design, ignition timing, fuel quality and mixture, etc.

SCE Dynopak BULK SETS

Bulk 10-Packs for Engine Builders

Another SCE first: Dyno Paks™ are tailor-made for engine builders and other volume gasket users. Each Dyno Pak contains 10 complete sets of the gaskets or seals you specify, clearly marked and shipped in a reusable box to protect your investment. Unlike other bulk programs which require a purchase of 100 sets or more, this bulk program is small enough to make sense yet still offers a significant 20% discount over the individual packaged price.

If you're an engine builder, make sure you stock your supply room with SCE Dyno Paks and reap the benefits of extra profits.

Dyno Pak part numbers are designated by a -10 suffix & listed adjacent to, below, or to the right of each individual part number.

Head Gaskets

Performance Composite Head Gasket

- Fits Gen III & IV Chevrolet Small Block performance engines.
- Note: 97' - 01' Gen III must use composite head gasket p/n 519974.
- MLS gaskets will not seal coolant passages on early LS1 head casting numbers 5339, 8806, 9862.

519974

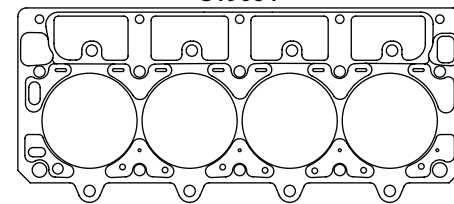

Copper Racing Head Gaskets for Gen III-IV Small Block

P19064

- Fits: LSX, LS7X, LS Next, Motown II, Warhawk
- All LS series Copper racing head gaskets use LSX 454 18 bolt pattern
- ICS Titan (S prefix) not recommended for 10 bolt engines

Head Gaskets**Performance Composite Head Gaskets for SBC**

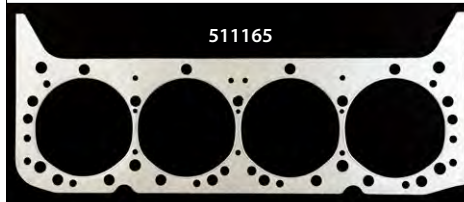

- Fits Chevrolet Small Block 327-383ci except LT-1/LT-4.
- Bore opening: 4.140" round.
- Available in standard or extra thick.
- **511144:** .040" compressed
- **511146:** .060" compressed
- Packaged individually.

Embossed Steel Shim Head Gaskets for SBC

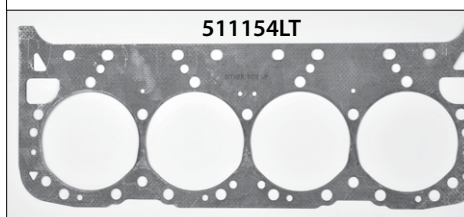

- Fits Chevrolet Small Block 327-383ci except LT-1/LT-4.
- **511091:** Bore opening: 4.090" / Thickness: .015"
- **511162:** Bore opening: 4.165" / Thickness: .021"
- Packaged individually.
- Suggested Use; up to 12:1 compression, no power adders, iron heads.

Embossed Copper Head Gasket for SBC

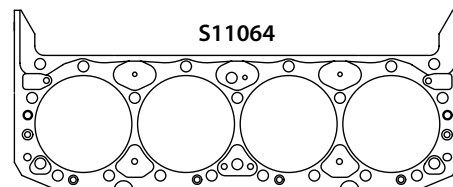

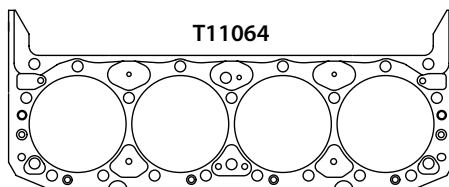

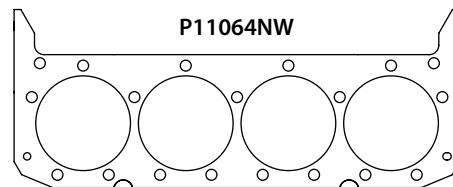

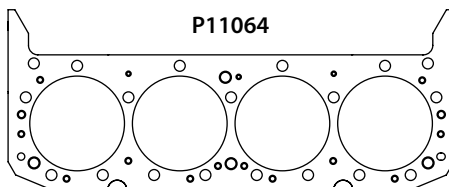

- Fits Chevrolet Small Block 327-383ci except LT-1/LT-4.
- Bore opening: 4.150"
- Compressed thickness: .020"
- Packaged individually.
- Suggested Use; up to 12:1 compression, no power adders, aluminum heads.

Performance Composite/Steel Head Gasket for 400ci SBC

- Fits Chevrolet Small Block 400ci. with siamesed bores & steam holes.
- Bore opening: 4.160" round.
- Compressed Thickness: .050"
- Packaged individually.

Performance Composite Head Gasket for LT-1/LT-4

- Fits Chevrolet 1992-97 LT-1 & LT-4 Small Block 350ci.
- Bore opening: 4.140" round.
- Compressed Thickness: .040"
- Packaged individually.

Standard BBC Exhaust Patterns

BBC Racing Derivative Exhaust Patterns

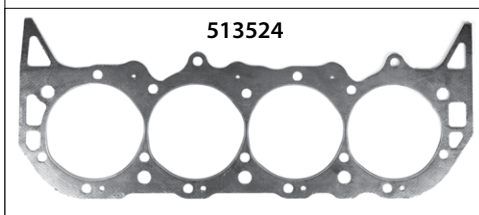

Head Gaskets

Performance Composite Head Gasket Mark IV Small Bore

- Fits Mark 4 style BBC up to 4.320" bore opening
- Bore opening: 4.320"
- Thickness: .040" compressed
- Packaged individually

Performance Composite Head Gasket for Mark IV Big Bore

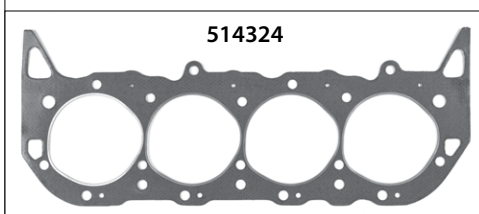

- Fits Mark 4 style BBC up to 4.520" bore opening.
- Bore opening: 4.520".
- Thickness: .040" compressed.
- Packaged individually.

Embossed Steel Shim Head Gasket for BBC

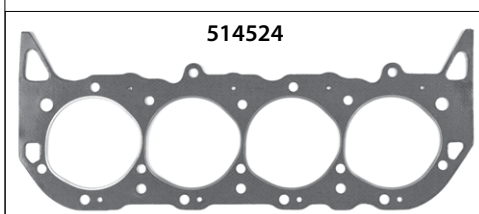

- Fits Mark 4 style BBC up to 4.320" bore opening.
- Bore opening: 4.320".
- Thickness: .020"
- Packaged individually.
- Suggested Use; up to 12:1 compression, no power adders, iron heads.

Performance Composite Head Gasket for Gen 5-6 Small Bore

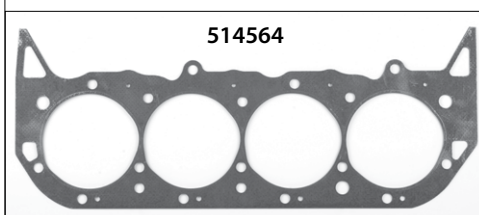

- Fits 1991-95 Gen 5 BBC up to 4.320" bore opening.
- Bore opening: 4.320".
- Thickness: .040" compressed.
- Packaged individually.

Performance Composite Head Gasket for Gen 6 Big Bore

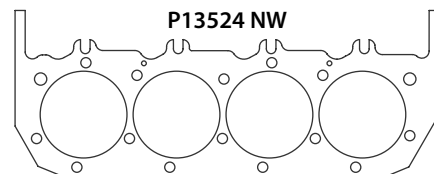

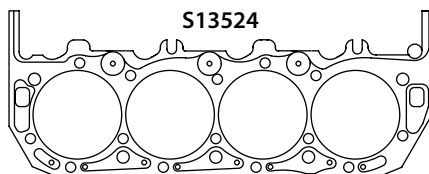

- Fits 1991 & later Gen 5-6 BBC up to 4.520" bore opening.
- Bore opening: 4.520".
- Thickness: .040" compressed.
- Packaged individually.

Performance Composite Head Gasket for Gen 6 Big Bore

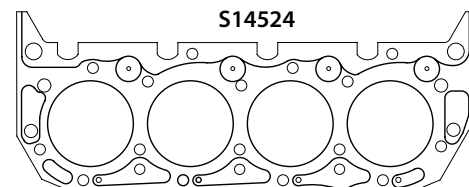

- Fits GM 572 Crate and other Gen 6 BBC up to 4.560" bore opening.
- Bore opening: 4.560".
- Thickness: .040" compressed.
- Packaged individually.

Edelbrock Victor 7219 1.750" x 1.600"	136085	36085-10	236185	36185-10	4636	
<i>Fits rectangle port headers, bolt spread 2.5" across ports</i>						
Windsor Wide Pattern 1.600" x 1.775"	136086	36086-10	236186	36186-10	4736	
<i>Fits World, Dart Windsor, AFR 225 with 3" bolt spread across ports</i>						
Square Port Dual Bolt 1.310" x 1.530"	136088	36088-10	236188	36188-10		
<i>Fits Dart, TFS, E351, includes both stock location bolt pattern and inline spread pattern</i>						
J302 / K302 AR Heads 1.200" x 1.470"					4536	
<i>Dual bolt pattern also fits Hooker adapter plate</i>						
4.6 / 5.4L Modular SOHC 2 Valve 1.5" Round	146080	46080-10	246180	46180-10	4046	
<i>Fits stock manifolds and 1 5/8" primary tube headers for 1991 & later SOHC 2v engines</i>						
4.6 / 5.4L Modular DOHC 4 Valve 2.125" x 1.250" Oval	146081	46081-10	246181	46181-10	4146	
<i>Fits BBK 1532, 1533 and similar oval port headers for 4v heads</i>						
4.6 / 5.4L Modular SOHC 3 Valve 1.5" Round	146082	46082-10	246182	46182-10	4246	
<i>Fits 2002 & later</i>						
351C / 351M / 400M 2 Barrel 1.350" x 1.875" Oval	152082	52082-10	252182	52182-10	4052	
<i>Fits stock 2 barrel oval port heads</i>						
351C / 351M / 400M Large Oval 1.375" x 1.875" Oval					4252	
<i>2 barrel oval enlarged for ported heads</i>						
351C 4 Barrel / Boss 302 1.790" x 2.055"	152080	52080-10	252180	52180-10	4352	
<i>Notch top rectangle, also fits CHI 3 Valve heads</i>						
SVO C302 / B351 1.750" Round	152083	52083-10	252183	52183-10	4152	
SVO Yates C3 2.00" x 1.750"	152081	52081-10	252181	52181-10		
Blue Thunder 18 Bolt 1.730" x 1.580"	145080	45080-10	245180	45180-10	4045	

See fitment instructions on page 358

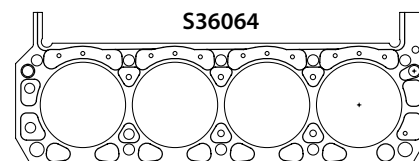

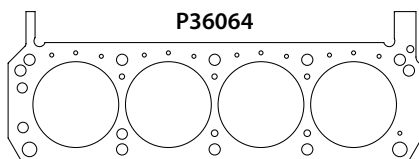

Head Gaskets
Performance Composite Head Gasket

- Fits 1964 & later Ford 260-351W engines.
- Bore opening 4.080"
- Compressed thickness: .040"
- Packaged individually.

Extra Thickness Performance Composite Head Gasket

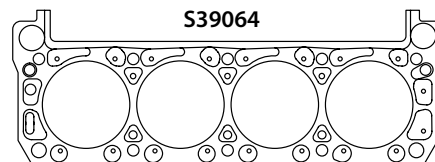

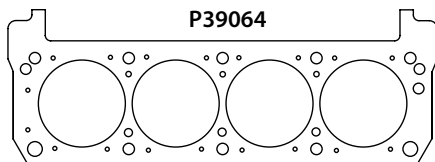

- Fits 1964 & later Ford 260-351W engines.
- Bore opening 4.080"
- Compressed thickness: .060"
- Packaged individually.

Technology Meets Carburetor Gaskets

- Jetting changes just got quicker & easier
- Super-tough molded gaskets
- Won't tear or stick
- Eliminates scraping
- Completely reusable

Standard Coated Gaskets for Holley Style Carburetors

Description	Part #	Pkg Qty
2300, 4150, 4160 Fuel Bowl	358	2 pc

How to Use the Engine Master Section of this Catalog

Engines are listed as follows:

1. **Make**
 - a. *Cars*
 - b. *Trucks, Mini-vans, SUVs*
2. **Number of Cylinders**
3. **Engine Displacement**
4. **Year of Manufacture**

Example: The Ford 2.5L 153ci 4 cylinder engine is listed before the Ford 2.4L 144ci engine because the 2.5L has 4 cylinders. This is unique as competitive brand catalogs list by make then displacement without regard to the number of cylinders.

Handy Competitive Cross-Reference

As an aid to quick selection where applicable, SCE Gaskets has listed the nearest equivalent part number (less Alpha Prefix) of the Fel-Pro® Passenger Car & Light Truck set part number just below the SCE Engine Master Gasket Set part number.

Fel-Pro® is a registered trade name and is not in any way associated with these products. It is used as a cross reference only to help in part number selection.

About Copper Head Gaskets

SCE Copper Head Gaskets are the superior choice for blown, nitrous, turbocharged and high compression engines. SCE Copper Head Gaskets can be used for deck/piston height adjustments. For example; if an assembled piston and rod combination is too high for the deck, (piston too close to the head) a thicker head gasket can be used to restore proper clearance. Conversely, if increased compression ratio is desired, a thinner gasket can be used. However, reason must be used when adjusting compression ratio with gasket thickness as every .010" change in thickness, nets approximately 2.5cc in volume. This method will never raise an 8.5 to 1 street engine to a 12.5 to 1 race engine or vice versa.

SCE strongly recommends the use of o-rings to seal combustion pressure, most notably when there are only 4 head bolts per cylinder. O-ring grooves can be cut into the block or cylinder head. The proper dimensions for .041" stainless wire (supplied in SCE kit – see page 68) are: .040" groove width; .030" to .032" groove depth.* When cutting/installing stainless o-ring wire, file the ends square, to provide a tight "joint" for the best seal possible.

SCE Titan and ICS Titan self sealing copper head gaskets require no sealant, however if you are using Pro Copper head gaskets, we recommend an anaerobic sealer such as Hylomar or Copper Coat. Always allow the sealant to tack up for 15 to 20 minutes before assembly.

Head gaskets on racing engines should be re-torqued after initial run-in, regardless of type, solid copper or composition. SCE recommends using factory torque specs and sequences. Allow the engine to cool for accurate readings. Always use a torque wrench and have it calibrated often.

Clean, flat surfaces are essential to seal a racing engine. Premium grade head bolts with hardened washers are recommended and studs are preferred.

* O-ring height should be no more than 25% of gasket thickness.

Compression Ratio Formula

Compression Ratio (CR) is defined as the quantitative relation between the total volume above the piston at BDC, and the clearance volume above the piston at TDC. To determine compression ratio you need to know:

- 1. Cylinder volume (V)** or cylinder displacement, determined by cylinder bore and stroke (indicated by movement of piston from BDC to TDC).

Cylinder volume formula (in cubic inches):
 $Bore \times Bore \times Stroke \times .7854$

- 2. Clearance Volume (V_{CL})** is the volume above the piston (actually above the top piston ring) at TDC. It consists of several small volumes which are measured in cubic centimeters, or CCs, as follows:

Deck Clearance Volume formula:
 $Bore \times Bore \times Depth \text{ of Piston @ TDC} \times 12.87$

Gasket Volume formula:
 $Bore \text{ of Gasket} \times Bore \text{ of Gasket} \times Thickness \times 12.87$
 (or refer to the chart below)

Valve Notch Volume: Available from your piston MFG, or must be CC'd using a burette. This figure must be **added** to clearance volume.

Piston Dome Volume: Available from your piston MFG, or must be CC'd using a burette. This figure must be **subtracted** from clearance volume.

Combustion Chamber Volume: Available from your cylinder head MFG, or must be CC'd using a burette.

- 3. Convert Total Clearance Volume** from CCs to cubic inches, **multiply** by .06102.
- 4. Add the two volumes together** (V + V_{CL}), then **divide** by V_{CL}.
 The formula is: $CR = V + V_{CL} / V_{CL}$

GASKET VOLUME CHART (IN CCs) GASKET THICKNESS

IN-BLOCK O-RING WIRE INSTALLATION INSTRUCTIONS

Step 1. When installing o-rings there are two main considerations for placement.
 A. The o-ring must be clear of the sealant beads on the gasket where applicable. This will determine the maximum outer diameter of the o-ring.
 B. The o-ring diameter and location must accommodate bore opening and combustion chamber size and shape. This will determine the minimum inside diameter of the o-ring.

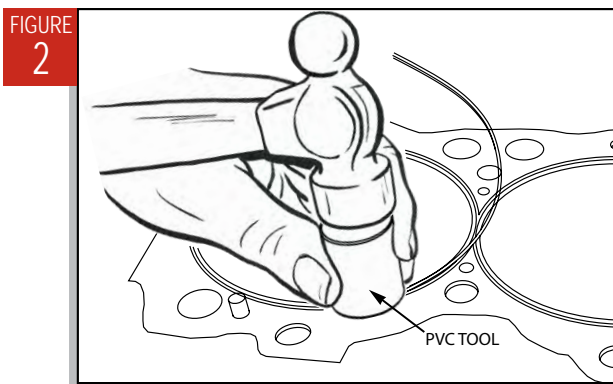

Step 2. Recommended o-ring protrusion is not more than 25% gasket thickness
 Example: Gasket thickness .043", o-ring protrusion height is .008" to .010". This standard works with all thicknesses that are .050" and less. Gaskets that are thicker than .050" do not require -ring height more than .012".

Step 3. If the combustion chamber or bore is so large that the o-rings will be placed less than .100" apart between cylinders, it is advisable to use a "figure 8" pattern for o-rings. This allows for more even clamping load over the entire head surface.

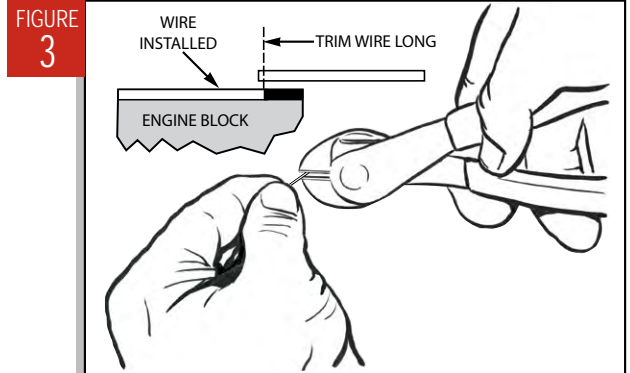

Step 4. New head studs/bolts are recommended for proper gasket sealing. Threads must be in good condition otherwise replace, a die can be used to remove old sealant and/or rust. Use a tap to clean threads in block. If threads are tapped through the deck, use care in sealing threads to prevent coolant migration up the bolt. If studs are to be used check for proper length so nuts do not "bottom out". Always use quality hardened washers and thread lubricant to prevent galling.

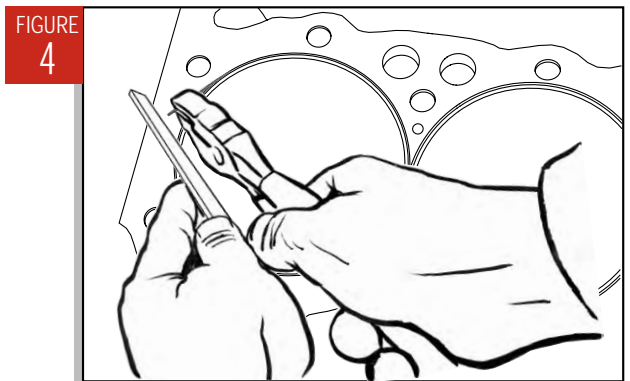

Trial fit and cut wire to approximate length +1.00". Using pliers and a fine mill file, square the starting end and insert near a head bolt.

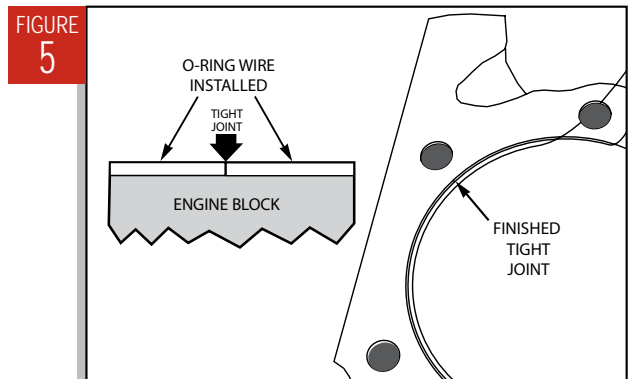

Seat the wire using the PVC tool provided in kit #31542. This will evenly distribute hammer blows and prevent flattening the wire.

After working your way around the bore, stop a few inches short and trim the wire slightly long in preparation for final fit.

Next using pliers and fine mill file, carefully fit the wire making a tight joint. If the gap is too wide start over. There is enough wire in the kit #31542 for approximately 10 cylinders.

After a few tries you can get the joint so tight that it is almost invisible. You can then take pride in having done by hand one of the most important steps in sealing your high performance engine.

Titan™ Copper Head Gaskets

SAMPLE Part # T11064

Recommended uses: Racing Engines with Heavy Boost or Nitrous running liquid coolant.

NOTE: O-rings are required in the block or head, Sealant is not required.

STEP 1 - Before installing head gasket, visually inspect for shipment damage. Sealant beads must be continuous without gaps or scratches.

STEP 2 - Titan series head gaskets require o-ring combustion seals installed in the head or block. (p/n 31542 o-ring kit) Great care has been taken to allow as much room as possible for o-ring placement, if your o-rings are already in the head or block check to see that the sealant beads are clear of the o-ring. (Continue to step 3 below)

Pro Copper™ Head Gaskets

SAMPLE Part # P11064

Recommended uses: Extreme Racing Engines such as Blown Alcohol or Nitromethane.

NOTE: This gasket requires o-rings (receiver grooves may also be needed with extreme extreme boost or nitrous) and sealant for coolant or oil passages.

STEP 1 - Before installing the gasket perform a visual check to insure that no damage occurred during shipping. The gaskets should be flat and free of dents or scratches.

STEP 2 - All SCE copper head gaskets are annealed in a vacuum oven after the punching process to provide malleable gaskets which are ready to use, do not use a torch to soften the gaskets. (Continue to step 3 below)

The Following Instructions Are Common to Both Titan Copper Head Gaskets and Pro Copper Head Gaskets.

STEP 3 - When installing o-rings there are two main considerations for placement.

A. The o-ring must be clear of the sealant beads on the gasket. This will determine the maximum outer diameter of the o-ring.

B. The o-ring diameter and location must accommodate bore opening and combustion chamber size and shape, this will determine the minimum inside diameter of the o-ring.

STEP 4 - Recommended o-ring protrusion is not more than 25% of gasket thickness (SEE FIGURE 1 BELOW). Example: Gasket thickness .043", o-ring protrusion height is .008" to .010". This standard works with all thicknesses that are .050" and less. Gaskets that are thicker than .050" do not require o-ring height more than .012".

STEP 5 - If the combustion chamber or bore is so large that the o-rings will be placed less than .100" apart between cylinders, it is advisable to use a "figure 8" pattern for o-rings (SEE FIGURE 2 BELOW). This allows for more even clamp load over the entire head surface.

STEP 6 - New head studs/bolts are recommended for proper gasket sealing. Threads must be in good condition otherwise replace, a die can be used to remove old sealant and/or rust. Use a tap to clean threads in block. If threads are tapped through the deck, use care in sealing threads to prevent coolant migration up the bolt. If studs are to be used check for proper length so nuts do not "bottom out". Always use quality hardened washers and thread lubricant to prevent thread galling.

STEP 7 - As with any performance application it is strongly recommended that head bolts/studs be re-torqued. Start the engine and allow it to reach operating temperature without placing any load on the motor. Shut down and allow the motor to cool to ambient temperature. With the engine cold and following the recommended torque sequence, one at a time back each fastener off just enough to relieve the friction set, then re-torque to specified torque value.

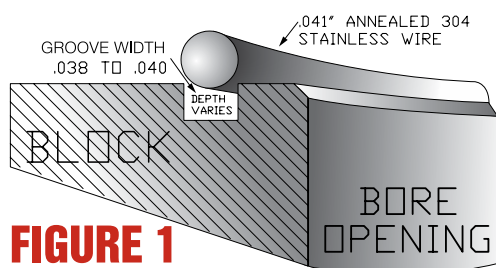

FIGURE 1

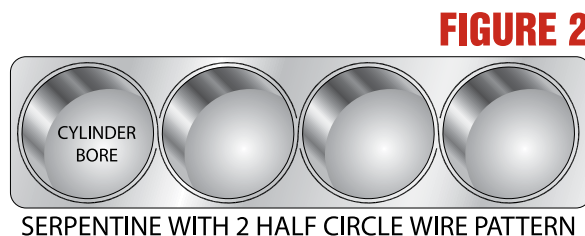

FIGURE 2

ICS Titan™ Self-Sealing Head Gaskets

Sample Part # S11064

Recommended uses: High Performance Street, Mild to Heavy Race, with Medium to High Boost or Nitrous.

Note: Do not use o-rings, sealant (such as Copper Coat or Hylomar) may be used if desired.

STEP 1 Before installing head gasket, visually inspect for shipment damage. Sealant beads must be continuous without gaps or scratches and the wire should not protrude out from combustion seal.

STEP 2 Gasket to head check, place cylinder head on a bench flat side up. Align new gasket on head in the assembled location, check to insure 360° metal to metal contact on combustion seal paying close attention to valve reliefs, see illustrations below.

STEP 3 Using extreme care, block and head mating surfaces should be scraped clean of any gasket material. Remove oil, grease, or sealant with proper cleaning solvent.

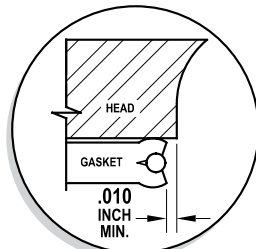

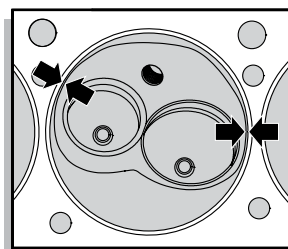

STEP 4 Check head and block mating surfaces to insure flatness within .002" using a steel straight edge and thickness gauge. If a sealing surface exceeds .002" out of flat, have the component resurfaced to an 80ra finish or better.

STEP 5 New head studs/bolts are recommended for proper gasket sealing. Threads must be in good condition otherwise replace, a die can be used to remove old sealant and/or rust. Use a tap to clean threads in block. If threads are tapped through the deck, use care in sealing threads to prevent coolant migration up the bolt. If studs are to be used check for proper length so nuts do not "bottom out". Always use quality hardened washers and thread lubricant to prevent thread galling.

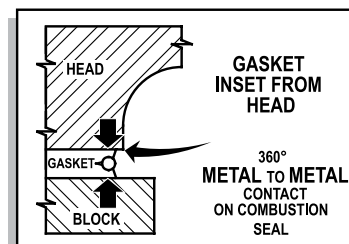

STEP 6 If sealant is desired for street engines, apply a light coat of spray Copper Coat or Hylomar on both sides, then let the gasket set for at least an hour before installing. Position new gasket over locating dowels on block. Position cylinder head over dowel pins without disturbing gasket, Tighten bolts and torque in sequence per manufacturers' specifications.

STEP 7 These gaskets must be re-torqued. Start the engine and allow it to reach operating temperature without placing any load on the motor. Shut down and allow the motor to cool to ambient temperature. With the engine cold and following the recommended torque sequence, one at a time back each fastener off just enough to relieve the friction set, then re-torque to specified torque value.

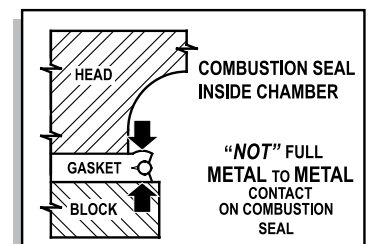

INSURE 360° CONTACT

CORRECT

INCORRECT

SCE Pro Copper™ Embossed Exhaust Gaskets

SCE Embossed Pro Copper Exhaust Gaskets outperform other gaskets because the sealing beads conform to header or manifold sealing surfaces. However, mismatched gaskets (such as a D-port gasket on an oval header) will cause leaks because the embossment is not in complete contact with the raised weld bead of the header. Pro Copper exhaust gaskets will provide years of leak free performance by following these simple steps are followed.

STEP 1 Determine the shape & size of the header or manifold opening. **Note:** with this type of gasket, the shape of the cylinder head exhaust port opening is of secondary concern. See illustration below.

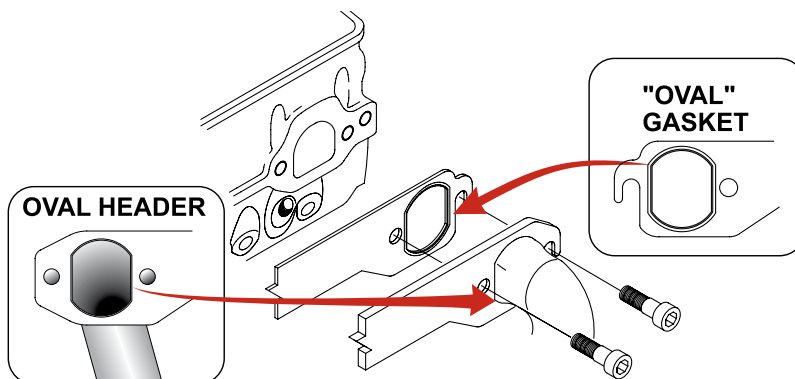

STEP 2 Select the SCE Pro Copper exhaust gasket which most closely matches the shape and size of the header or manifold opening. Insure that the embossed sealing bead will rest on the raised weld bead of the header sealing surface when assembled.

STEP 3 Clean and lubricate the threads in the cylinder head so full clamping is achieved when bolts are torqued. Once the gasket is fully seated the bolts will not loosen because the gasket is solid metal and will not shrink from repeated heat cycling.*

STEP 4 Install gaskets and torque to specification. Proper torque for new lubricated 3/8" x 16 grade 5 bolts is between 25 and 30 foot pounds.

* Extreme heat applications such as towing may cause the gaskets to relax slightly as indicated by a "ticking" sound at idle. Do not discard the gasket; simply re-torque the bolts, 1 re-torque is usually sufficient for permanent sealing.

Embossed Copper Gasket Selection

Note: be sure to match gasket shape to header shape!

SCE Pro Seal Composite Head Gasket

Sample Part # 511144

Recommended uses: Stock Replacement to Mild Race with Mild Boost or Nitrous

Note: Do not use with sealants or o-rings

STEP 1 Before installing the gasket perform a visual check to insure that no damage occurred during shipping. The gasket(s) should be flat and free of dents or scratches.

STEP 2 Good engine building practice requires clean, flat surfaces and clean head bolt / stud threads. Use a solvent degreaser to remove oil from block & head. If fastener threads are tapped through the deck, use care in sealing the threads with a quality sealant (part # G1615) to prevent coolant migration up the threads.

STEP 3 Quality fasteners are critical to the success of your project. OEM style head bolts are fine as long as they are new. When using studs make sure there is adequate thread length so that nuts don't "bottom out". Always use thread lubricant and good quality hardened washers. It is always recommended to follow engine manufacturer torque sequence and values.

STEP 4 As with any performance application it is strongly recommended that head bolts/studs be re-torqued. Start the engine and allow it to reach operating temperature without placing any load on the motor. Shut down and allow the motor to cool to ambient temperature. With the engine cold and following the recommended torque sequence, one at a time back each fastener off just enough to relieve the friction set, then re-torque to specified torque value.

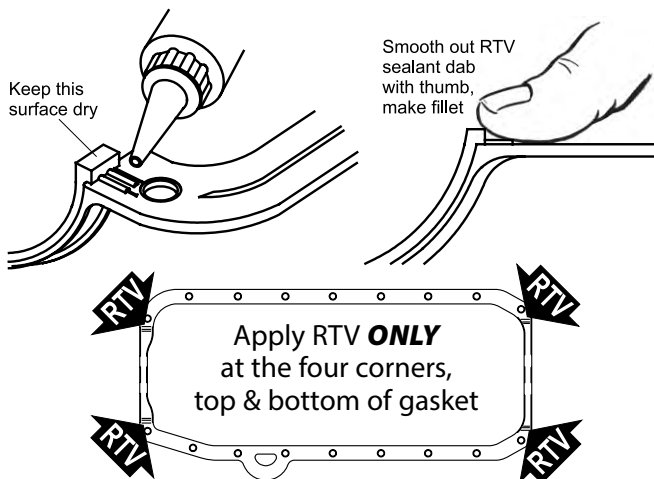

SCE One-Piece Oil Pan Gaskets

To insure that your engine oil pan gasket is sealed properly and for prolonged care free performance, please follow these instructions.

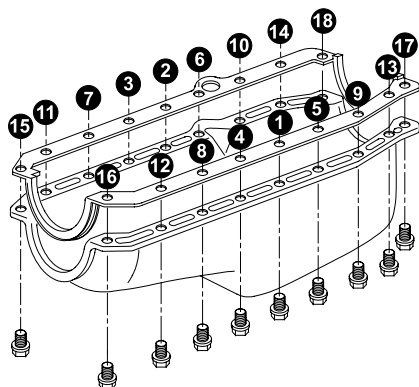

Step 1 - Scrape and clean engine block and oil pan mating surfaces. Remove any oil or grease with proper cleaner.

Step 2 - Check oil pan holes and flanges for flatness. Check bolts for stripped threads or heads, threads must be straight and clean, replace as necessary.

Step 3 - To allow for differences in aftermarket oil pan stampings, use "small" dab of RTV sealant ONLY at rail ends front and back of oil pan as shown.

Step 4 - Install SCE "One-Piece" oil pan gasket to engine block paying close attention to tab inserts at rear main cap and front cover assembly, then set oil pan in place carefully. Install oil pan bolts and torque to manufacturer's requirements in sequence, "crush limiters" will prevent damage to gasket from over tightening.

Step 5 - Torque oil pan bolts. Basic torque specifications for Chrysler, Ford, and GM engines.

Chrysler -
Torque to 100 inch-lbs.

Ford -
Torque to 100 inch-lbs.

GM -
Torque to 100 inch-lbs.
(For Chevy small block V6 and V8 engines 1986 and later).

Follow tightening sequence as shown in Step 4.

Step 6 - Add engine oil and check for leaks, then start engine and re-check for oil leaks.

Under Car Installation

For under car installation of SCE "One-Piece" oil pan gaskets it is helpful to use a light adhesive such as "Gasgacinch" to hold the gasket in place during assembly. For ease of assembly please follow these tips:

1. Lay the gasket block side up and apply a light coat of adhesive on both pan rails, let tack for 5 minutes. Apply RTV sealant as shown in Step-3.
2. Thoroughly clean all oil and grease from engine mating surfaces and apply a light coat of adhesive to engine block rails, let tack for 5 minutes.
3. Locate the pan gasket on the engine using 1 bolt in center of each pan rail, then stick gasket in place paying close attention to tab inserts at rear main cap and front cover as required.
4. Remove locating bolts and install oil pan and bolts, torque as required.

Note: It is critical that tab inserts at rear main cap are properly seated. Do not install gasket on oil pan first and attempt to assemble to block as it is difficult to align and insert tabs properly. If tabs are not seated properly serious leakage may occur.

SCE Project Car

- 1968 Camaro
- Engine: 383ci
- 476 HP @ 5700 rpm
- 476 ft. lbs. @ 4700 rpm
- Carb: Barry Grant 750 cfm
- Cylinder Heads: Brodix Track 1
- Pistons: Ross 10.5:1
- Crankshaft: Scat
- Camshaft: Comp Cams Hyd. roller
- Ignition: MSD digital 6
- Trans: Richmond 6 speed
- Gear Ratio: 3.08:1
- 4 Whl Disc Brakes by SSBC

Growing to Meet Demand

This issue of the SCE Gaskets catalog represents completion of a sizeable transition for the company. Acquisition of the Iowa gasket manufacturing plant in late 2011 began an 18 month period of system, facility and equipment upgrades, production streamlining, launch of the Engine Master Gaskets kit product line and a completely new look for the company.

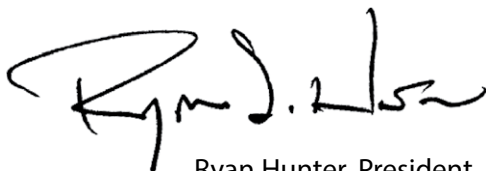

Performance Under Pressure

As always, SCE Gaskets continues to develop new sealing products for the performance and racing community as seen in the Racing & Performance section of this book. Lessons learned in racing 'spill over' into our new Engine Master Gasket line for street vehicles resulting in high quality USA made gaskets for any popular domestic car or light truck engine made in the last 60 years.

Continuing Innovation

SCE Gaskets works with top professionals developing and testing new sealing ideas under the most extreme conditions to bring you dependable gaskets that 'Seal it Tight'. Embossed Copper Exhaust gaskets, patented ICS Titan Head Gaskets, Dyno Pak bulk packs, Precision- Molded Carb Gaskets and proprietary steel-core materials are just some of the ways we've made engine sealing easier.

With sincere thanks,
