TRACK RESPONSE TRAINING

TRACK AND SERIES AFFILIATIONS

RESPONSE TEAM AND VEHICLES

The RTSS response staff is a group of hand-picked experienced track responders that have worked or currently are with national series or large track crews. Personnel are trained through their series classes, ESI courses and most carry SFI certifications in Fire/Rescue and/or Jump Medic Response.

The RTSS Response staffing includes up to four track responders per vehicle that includes:

- Firefighter
- Medic/Firefighter
- Driver/Crew Chief

ESI RTSS has two fully equipped vehicles available to support various series and track services during special or national series events.

These vehicles are pickup trucks that are equipped for:

- Fire suppression
- Extrication
- Driver extraction
- Medical intervention
- Straight line tows
- Track clean up

See the separate truck equipment list

Additionally, ESI RTSS has a Support Trailer that provides:

- Equipment and supply storage
- Changing areas for crew members
- Small galley for food and beverage
- Space to transport a golf cart and training props

ESI RTSS has a gas-powered Golf Cart for on-track transportation. This cart can be equipped with an Enforcer 10 CAFS fire suppression unit. LED emergency lighting is installed on the upper roof panels.

RESPONDER TRAINING

ESI Race Track Safety Services supports the International Council of Motorsport Sciences (ICMS) programs and was part of the group that initially established the Race Track Safety Program (RTSP). ESI personnel have become SFI certified instructors and travel throughout the US conducting SFI training programs for fire/rescue/EMS responders.

ESI RTSS has developed several training props and has collected several chassis for training purposes.

This includes:

- IndyCar tub for open-wheel driver extractions
- Stock Car equipped with front and rear propane burners to train, creating a pathway to life during a fire
- Sprint/midget cars chassis for driver extraction training

TECHNICAL & EQUIPMENT SUPPORT

ESI Race Track Safety Services provides technical support and equipment to a number of race series, sanctioning bodies and tracks. During a race season, ESI supports track response training and has a presence at national race events.

This support includes:

- Technical support of fire/rescue equipment
- Safety supplies for track personnel
- Other support services

ESI RTSS's goal is to ensure that track personnel and lifesaving equipment are race-ready at all times during an event. ESI's highly skilled technicians provide preventative maintenance procedures and testing prior to each major event. Personal protective equipment is available for each track responder while on track. The ESI RTSS Support Trailer provides support, a common space and meeting area for first responders.
