# CUSTOM GASKETS

Cometic's custom gaskets can accommodate virtually any engine configuration from naturally aspirated, to the most exotic turbo and nitrous injected engines. Our commitment is to provide innovative, quality gaskets while maximizing your engine's power and performance. When customization is key, Cometic delivers!

Cometic has the ability to customize any gasket to meet your specific application. Need to change the bore size and/or thickness of a gasket? Or do you need a complete gasket design and execution? The process starts with a simple phone call. After Cometic's in-house Technical Sales Team understands your needs, they work directly with our design engineers to insure the gasket is drawn with state-of-the-art software and manufactured with the best materials possible with the most current and efficient manufacturing processes. If special tooling is required, we'll provide a pre-production estimate for approval. Your gasket is then made and shipped. The lead-time on bore and thickness changes is just three days. A complete gasket design takes just two weeks.

The passion for racing runs deep in our Technical Sales and Engineering Teams. We understand the importance of perfection in your next engine build because we are right there with you racing on weekends.

## GASKET MATERIALS

# MLS Multi Layer Steel Gaskets

Cometic MLS gaskets are comprised of three to five layers of Stainless Steel. Cometic uses Stainless Steel for increased strength, its ability to rebound and corrosion resistance. The outer layers of the gasket are embossed and coated on both sides with a High Performance Polymer coating designed to meet the demands of a variety of harsh sealing environments, load conditions and surface finishes. The coating is heat resistant to 250C or 482F.

The center or shim layer of the gasket is comprised of an uncoated Stainless Steel layer, which can be varied to accommodate multiple thickness requirements. MLS gaskets are ideal for any kind of head and block combination. By design the MLS gasket promotes an even torque load across the sealing surface allowing for measurable reduced bore distortion.

**Available thickness:** .027", .030", .036", .040", .045", .051", .060", .066", .070", .075", .080", .086", .092", .098", 120"

### AFM (Aluminum Foam Material)

A chemically blown, compounded nitrile synthetic rubber bonded to an aluminum core with temperature resistance of over 250F. AFM material has an 85% recovery while maintaining strong torque retention. AFM does not require gasket sealers or re-tightening. **Available thickness:** .018", .032", .060"

### Aramid Fiber

A premium hi-temperature, hi-density creep resistant material that requires no re-torquing and is fuel resistant. All Cometic fiber materials are asbestos free and require no additional sealants. **Available thickness:** .012", .015", .020", .031", .039", .047", .060", .094", .125", .188

### Aluminum

Solid material ideal for spacers and shims.

**Available thickness:** .010", .016", .020", .025", .032", .040", .050"

### Nitrile Rubber Coated Steel

A steel core with a .001" thick coating of nitrile rubber on both sides. **Available thickness:** .010", .014", .020"

### Copper (Dead Soft)

**Available thickness:** .005", .010", .016", .020", .027", .032", .043", .050", .063", .080", .094"

### Valve Guide Seals

Cometic viton steel body (VSB) seals are available for most applications ranging from automotive to motorcycles. Valve stem seals are defined first by the actual measurement of the valve stem OD itself then by the guide OD. Proper seal height and width will be determined by valve spring clearance.

#### *Top-End Kits | Bottom-End Kits | Clutch and Mag Kits | Crank Seals | Individual Gaskets | Engine Seal Kits*

Today's lightweight engines are producing more horsepower, higher cylinder pressures, clamp loads and extreme temperatures. Our commitment is to provide innovative, quality gaskets while maximizing your engine's power and performance. Cometic's gaskets are proudly made in the USA with materials manufactured on American soil. We are constantly updating and adding models to our ever growing library of gaskets.

Be sure to check out our NEW Clutch and Mag Kits made from AFM Material. AFM will not stick to the engine case making replacement quick and easy, no more scraping. The aluminum core gives the gasket strength for a superior seal and prevents the gasket from weeping or crawling out. All gasket kits (Top-End, Bottom-End, Clutch and Mag) are sold with the proper amount of gaskets for one application. Need just one gasket, not the entire kit? No problem, we offer individual gaskets.

Cometic is a proud sponsor of Ricky Carmichael, Team Green, The Orange Brigade & Kawasaki Factory Motocross to name a few.

### Cometic Installation Procedure for Harley Davidson Milwaukee 8 MLS Head Gaskets

- Check all gasket surfaces for flatness and imperfections, an excessively rough finish may cause gasket failure.
- A surface finish on both the head and cylinder of 50RA or finer is recommended.
- Check all hardware for defects.
  - Bores 3.937" to 4.250" use the triangular shaped embossments on both Oil and Coolant cooled heads.
  - All Oil Cooled heads on larger than 4.250" bores **MUST BE WELDED**. The oil port is exposed to the bore.
  - Coolant Cooled heads require the circular embossments on bores larger than 4.250".
- Clean all threads and lubricate both threads and the underside of the bolt flanges with a light machine oil. Wipe away any excess.
- All surfaces must be clean and dry.
- **No sealants are required when installing a Cometic MLS gasket.**

### Cometic recommends following all OE Torque Procedures in the service manual.

1. Tighten the head bolts in the recommended X pattern to 20-30ft-lbs.
2. Loosen all head bolts one turn.
3. Tighten all head bolts using recommended X pattern to 9-11ft-lbs.
4. Tighten all head bolts using recommended X pattern to 25-27ft-lbs.
5. Final torque is a 90 degree turn using the recommended X pattern.

### Cometic MLS Head Gasket Instructions for Harley Davidson Evolution & Twin Cam applications

**NOTE: DO NOT USE THE CYLINDER HEAD ALIGNMENT DOWEL O-RING WHEN USING AN MLS GASKET.**

**NOTE: COMETIC GASKET RECOMMENDS THE HEAD BOLTS BE SET AT A FINAL TORQUE OF 42FT-LBS.**

1. Check all gasket surfaces for flatness and imperfections, an excessively rough finish may cause gasket failure. A 50RA surface is recommended.
2. Check all hardware for defects, clean all threads and lubricate with light machine oil. Including the underside flange of the head bolts. (Wipe away any excess.)
3. There are two short and two long head bolts. The short go on the spark plug side while the long go on the pushrod side.
4. Before installing the head, place the head gasket on the cylinder and locate the gasket using the cylinder head alignment dowels (NOTE: The gasket is embossed around the dowel area and the dowel holes are smaller. Do not use dowel alignment o-rings with an MLS gasket.)
5. Once the gasket is located in place make sure the gasket fits your bore. The gasket should not hang in the bore or combustion chamber in any area.
6. If using a head or cylinder other than stock, check brass rivet location to ensure the rivet does not interfere with the sealing surface in any way. Some aftermarket castings are substantially larger than stock castings and may interfere. Simply remove the brass rivets, "side cutters work well".
7. Once proper fitment is established proceed with head installation and torque. (NOTE: See illustration for sequence.)
8. Alternately snug all the head bolts finger tight.
9. In sequence tighten all head bolts to 9 ft-lbs. Then in sequence tighten all head bolts to 14 ft-lbs. Again in sequence tighten all head bolts to 22 ft-lbs. Then in sequence tighten all head bolts to 35 ft-lbs and finally torque all head bolts to a final torque of 42ft-lbs in sequence.

**Note: Failure to comply with any or all of these instructions may result in premature failure of the head and or base gasket.**

**Note: All Panhead, Shovelhead & Iron Sportster models use factory specs when using an MLS head gasket.**
