

2019 PRODUCT CATALOG

The industry's highest quality & most complete line of drivetrain parts.

Home of the Best Brands in Drivetrain.

Performance.

Yukon Gear & Axle® manufactures the highest quality drivetrain parts in the industry. Off-road, on the street, and at the track, Yukon provides the widest selection of drivetrain parts for all of your heavy-duty & performance application needs.

OE Replacement.

USA Standard Gear® sets the standard for quality drivetrain parts at affordable pricing. Designed for the general installer and the do-it-yourself consumer, USA Standard provides unmatched reliability in OE Replacement & Component Drivetrain Products.

Remanufactured.

Zumbrota Drivetrain® has completely rewritten the book on remanufactured drivetrain assemblies. Experience, pride, and expert craftsmanship go into every unit resulting in an industry-leading product line for hundreds of applications.

Parts Finder.

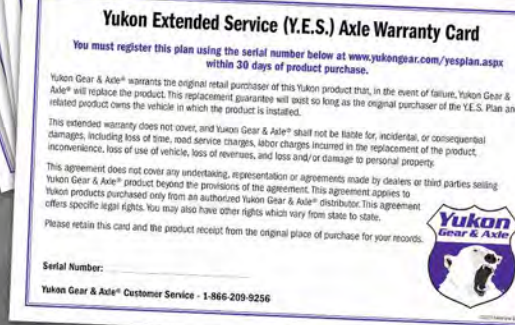

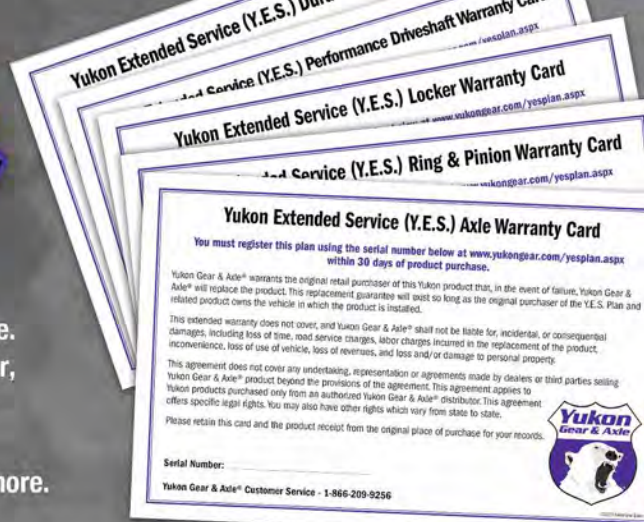

The industry's most powerful Differential Parts Finder. From '48 to today's hottest models, the Diff Wizard® is a must-have parts identification resource for thousands of differential product applications. In just a few clicks, the Diff Wizard allows you to find the right parts for your build the first time.

JUST SAY Y.E.S.

Say Y.E.S. to the Yukon Extended Service Plan.

Yukon Y.E.S. Plans are available through Yukon Distributors nationwide. The Y.E.S. Plan provides no-questions-asked coverage to the purchaser, for as long as they own the vehicle.

Y.E.S. Plans are available on top quality lockers, driveshafts, gears & more.

Y.E.S. Plan Products

Yukon Dura Grip®

- Assembled in the USA
- Aggressive positraction
- Smooth transfer of torque
- Rebuildable 4-spring design
- Internals machined from forged 4320

Yukon Zip Locker®

- Air-operated locking differential
- On-demand traction
- Assembled & tested in the USA
- Forged case & 8620 internals
- Backed by *The Best Warranty in the Business*

Yukon Grizzly Locker®

- Mechanical locking differential
- 8620 case & internals for maximum strength
- Patented design reduces common locker failures
- Assembled in the USA
- Backed by *The Best Warranty in the Business*

Yukon Performance Driveshafts

- Fits '07-'17 Jeep JK front & rear
- 2 door & 4 door applications
- 1310 & 1350 U/Joints
- OE & HD Designs
- Fits up to 4 1/2" lift

Yukon Axles

- 1541H & 4340 chromoly alloys
- Rear axles for SUV, light-duty truck & passenger car
- Early & late model applications
- Precise machining & advanced heat treating technologies

Yukon Ring & Pinion Sets

- 8620 steel for high strength
- Set up smooth & easy
- Ratios up to 7.17
- 500+ part numbers available

Yukon Understands Quality!

Yukon invests significant care and attention to detail in every product we offer. This added effort requires extra time. However, it provides our customers with a strong high-quality gear set or axle that is easy to set up and quiet to use.

Such consistent, outstanding product results require the highest standards and a proven approach. Top-quality materials, deep heat-treats, and the latest in manufacturing technology go into every Yukon product. Our operations and materials are first-class and monitored every step, from design and manufacturing through shipment and delivery.

No matter what model you drive, or what ratio you need, high-quality Yukon Gear & Axle products are the right choice. Yukon products reflect a professionalism and pride that are unequalled in the industry. Before we approve any part for production, we put it through a rigorous series of tests and inspections to ensure that you will be delighted with your purchase.

Our ongoing Quality Assurance practices enable you to be confident that your Yukon purchase will perform as expected and demanded. All of these steps are performed to provide Yukon products that meet or exceed your expectations.

To give you an idea of how gears are created, here is a brief overview:

First, a need for a specific gear is identified. Once this need is validated, the gear design is performed. Design starts with a computer-generated gear summary, which is used to establish tooth proportions and stress data. This gear summary is also used to develop the tooling that will be used to manufacture the gear.

Once the design is complete, forging dies are manufactured. These dies are used to create the forged gear blanks. Forgings are used because they provide the optimal material grain flow, which in turn results in a stronger gear. Forging blanks for Yukon gears are made from premium-grade materials such as 8620 triple alloy (Chrome-Nickel-Moly) steel. To create these blanks, a piece of the proper steel is heated to 2,100°, which is hot enough for the material to become malleable but remain below the melting point. This hot steel is then formed using the forging dies, which shape the steel to the approximate final overall shape. After forging, the hot steel is reheated to 1,700° F, then allowed to slowly cool for the perfect level of hardness for machining. This "reheat and slowly cool" process is called "Normalizing".

After the forgings have cooled, they are machined into semi-finished blanks.

The blanks are machined, and the gear teeth are cut. This step is critical to the final quality of the gear. Tooth cutting is a process that requires an extremely skilled machine operator. There are only a handful of such people in the world, and Yukon relies on the best of this elite group.

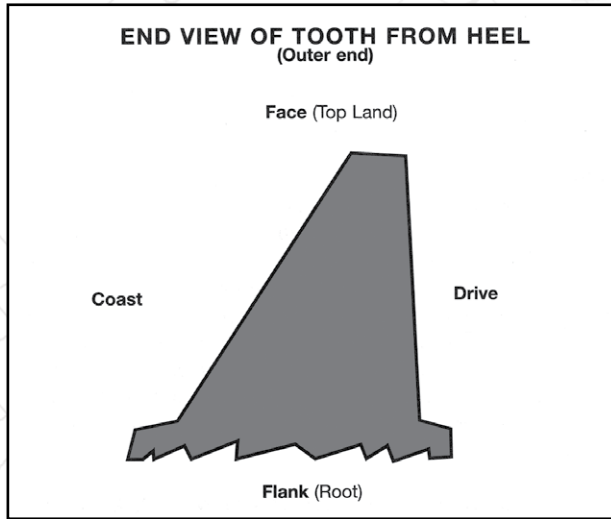

After the teeth are cut, the parts (which by now are looking similar to the finished gears) are heat-treated in a computer-controlled furnace that allows precise and consistent temperature control for high strength and durability, as well as surface carburization for extra wear resistance.

Finally, the finishing processes are performed. This starts with gear lapping, where the ring gear is mated to the pinion gear. Gear lapping is done in a Computer Controlled lapping machine that runs the ring and pinion together while a silicon carbide abrasive, suspended in a free-flowing oil solution, is run over the two mating surfaces; this results in a micro-fine finish. The final finishing process is precision grinding of the bearing surfaces, which results in bearing diameters, which have tight tolerances and tight concentricity and cylindricity. Combined, these characteristics deliver Yukon gears that are smooth running, quiet, and easy to set up.

Yukon Gear & Axle provides the highest quality and widest possible selection of differential parts at the best possible prices. Yukon products are manufactured using state-of-the-art equipment and manufacturing techniques by some of the world's foremost leaders in OEM manufacturing

We Understand Highest Standards and Best Practices

Elements of a gear tooth

Yukon Gear & Axle holds itself and its suppliers to the highest standards, which is why Yukon products are among the highest quality parts in the world. Yukon will never waiver on its commitment to build a high-quality product. We will always devote the time and effort required to make parts that meet or exceed the expectations of our customers.

When it comes to differential setups, gear pattern may well be the most controversial and debated issue. This is where best practices come into play, supported by facts.

It seems everyone has an opinion on gear patterns subject even though many are based on popular myths and misconceptions. For example, the beliefs that race cars need a deeper pattern for strength, or the use of lighter bearing preload can provide less resistance can actually create more problems than intended solutions.

In reality, proper gear set-up is the same no matter if you are setting up a rear-end for drag purposes or street driving.

Another popular industry misconception regarding gear pattern is that tooth contact must be centered in all directions (e.g. face-to-flank and heel-to-toe) to achieve a strong and quiet setup. We live in a world, however, where even the highest quality materials contain same dimensional variation, and sometimes this variation prevents the installer from achieving a perfectly centered pattern. Most of the time this variance is seen in housings, as they are not precision machined like ring and pinion sets.

Before we get any deeper into what the pattern should look like, let's get the terminology straight. See the illustration above.

How Yukon differs from other gear and axle providers comes down to experience and expertise. The gear development and manufacturing process is complex, and we know it intimately.

Acceptable Patterns

A This is an example of the perfect pattern that we would all love to see but rarely get. In many cases, you will achieve a pattern that is centered face-to-flank but runs at the outer edge of the heel or at the inner edge of the toe.

B This is an acceptable pattern. It will run quiet and strong for years. Attempting to adjust this type of pattern in an effort to center it heel-to-toe will adversely affect the face-to-flank, and will probably end up producing a noisy differential.

The simplest way to describe a good pattern is this: there should be smooth even contact, with no sharp edges or points, centered from face-to-flank.

Here are some examples of patterns that are unacceptable:

C This pattern is too close. The pinion should be moved away from the ring gear.

D This pattern is too far away. The pinion needs to be moved closer to the ring gear.

Simply put, pattern is everything for gears. A poor pattern will produce noise and premature wear. Taking some extra time to make sure the set up is correct is worth the effort and will pay off with a quiet running set up the first time.

Axle Shafts

Fierce Performance

Yukon customers deserve more than just a low price. They deserve the confidence that goes with buying the highest quality product on the market.

We have searched the world to bring you the best axle shafts available for heavy-duty use in truck, car, racing, and off-road applications. Yukon Axles are produced using state-of-the-art equipment and manufacturing techniques by some of the world's foremost leaders in OEM axle manufacturing. We visit the factories. We know the people. And we constantly strive to improve the processes. We stand behind the quality of Yukon axle shafts.

Strength

The first consideration in creating a high-quality axle shaft is raw material. There are a number of choices in axle shaft steel, and many serve adequately for average applications. However, "adequate" and "average" are not good enough for Yukon. Yukon Axles use steel formulated for true heavy-duty applications.

Steel Types

Steel choices for OEM axle manufacturers include 1040 steel, or 1050 steel for OEM replacement Axles. 1040 is less than preferred when it comes to strength. There are several grades of steel available for axle shafts. Selecting different alloys can greatly increase strength. Using high-quality alloys gives Yukon Axles more strength than competitors' Axles. High performance Yukon Axles are made using 1050, 1541h, and 4340 alloy steels.

1050 steel, on the other hand, works great for OEM replacement axle shafts in trucks and many passenger cars. 1050 steel has considerably more carbon than 1040 steel, which makes it approximately 18 percent stronger and 16 percent harder than 1040. The 1050 steel used in some of our OEM replacement axle shafts provides more than enough strength for the heavy-duty use they will see.

For most high-performance applications, 1541H steel is the steel of choice. 1541H contains significantly more manganese than 1040 or 1050 steels. This additional manganese increases strength and hardenability, and aids the deep heat-treat process. These characteristics make 1541H a great choice for high performance and custom axle shafts. Additionally, 1541H is far stronger than 1050 steel without being a whole lot more expensive. This alloy, when heat-treated correctly, also delivers on durability. 1541H steel is approximately 20 to 25 percent stronger than the 1040 steel used in OEM axle shafts.

Alloy Steel Grades

There are several grades of steel available for axle shafts. Selecting different alloys can greatly increase strength. Using high quality alloys gives Yukon axles more strength than competitors' axles. High performance Yukon axles are made using 1050, 1541h, and 4340 alloy steels.

Yukon Means High Quality

For extreme high performance use where twisting torque is important, but bending stresses are limited, 4140 or 4340 Chromoly alloy steels work well. 4140 Chromoly provides approximately 27 percent more strength than 1040 steel, while 4340 Chromoly provides approximately 39 percent more strength than 1040. This translates into huge gains in twisting strength, assuming bending will not be an issue. 4340 is approximately 10 percent stronger than 4140 due to the extra nickel content, which increases toughness and strength.

Hardness

Hardness is an important material property that affects material strength. Hardness is related to a material's resistance to deformation or penetration. A well-made axle shaft with the right alloy and the proper hardness is less likely to wear, bend, twist, break, or deteriorate as a result of the pressures and forces it supports.

Achieving the desired level of hardness in an axle shaft is done by controlling several processes. Selecting the right material, and using the proper processes for tempering, normalizing, and heat-treating are all necessary in order to produce a strong axle shaft. Most automotive axle shafts are case-hardened. Case-hardening leaves a hard surface layer (approximately 0.100" to 0.400" deep) and a relatively soft, strong, tough core. Through-hardening can increase strength, but it can also lead to problems if the shaft is used to support the weight of the vehicle. Through-hardening produces a shaft, which is usually too brittle to support the side loads the flange incurs while supporting the

vehicle. Case-hardening causes less distortion and cracking than through-hardening, especially in large cross sectional areas.

Effects of alloying elements on steel:

Carbon:	Hardness
Chromium:	Hardenability and corrosion resistance
Manganese:	Strength, hardenability, response to heat treating
Nickel:	Toughness and strength
Silicone:	Deoxidation, hardenability
Molybdenum:	High temperature strength and hardenability
Phosphorus:	Strength

Quality

There are many intricate and scientifically proven processes involved to produce a quality Yukon axle shaft. The short list: choosing the right steel, upset forging the flange end, normalization of the material, rough turning into the approximate shape of the shaft, final smooth-turning, cutting or rolling the splines, drilling the stud holes, turning the C-clip groove, hardening the shaft, magnaflux inspection for cracks, finishing/grinding the bearing and seal surfaces, and finish machining the flange. We take great pride in doing each step right and ensuring the highest quality axle for you.

Axle Splines

Axle splines can be cut or rolled into the shaft. Both methods are certainly strong, and each comes with its own advantages. Rolled splines can produce a better grain structure in the material for extended durability, while cutting the splines allows the shaft hardness to be consistently thick right up to the ends of the splines. Both spline forming methods hold up well for axle shafts, and both can be a good way to go.

Yukon axle shafts are made with both methods, depending on the specific application requirements for accuracy, strength, and durability. Putting all of these variables together into a first rate finished product takes millions of dollars worth of equipment, an incomparable attention to detail, and a lifetime of experience.

Yukon axles are made from the finest alloys and carefully heat-treated using modern

computer-controlled hardening equipment. Deep heat-treating gives Yukon Axles more strength and more resistance to abuse.

As you can see, steel can vary depending on quality and production methods. Yukon Axles are heat-treated for consistent, tight grain structure. Tight grain structure and deep heat-treating provide greater strength and longer life.

We travel the world to find you the best, and we know that our axle shafts will deliver on our promise

Steel Grain Structures

Yukon Ring & Pinions

The utmost care and quality is put into every Yukon differential component manufactured. This effort undoubtedly demands extra time, but ultimately it allows us to ensure a quality pattern, a solid fit and a clean finish. Yukon gears are easy to set up, and they run quietly.

OEM-Style Replacement

Yukon manufactures a full line of high-quality OEM replacement ratios to accommodate most SUVs, light trucks and rear-wheel-drive passenger cars. Yukon duplicates, and often exceeds, the OEM specifications. This is the case with the GM 8.5" (below) and Chrysler 9.25" gears. These gears are engineered to last longer and run cooler and quieter than other aftermarket gears. When properly set up Yukon gears are extremely quiet.

Heavy Duty Towing

In many cases the factory ratios are not low enough to give you the pulling power you're looking for from your tow rig. Yukon has the answer to all your trailer-pulling needs. We offer a full line of gear ratios from 2.73 through 7.17 for most 2WD and 4WD trucks and SUVs. So if you're looking for more power or you're correcting for larger tires, Yukon has you covered.

Racing and Performance

Yukon is always working hard to maintain its position on the cutting edge of the racing world as well as the differential industry. We offer a large variety of ratios for the Ford 9", GM 12-bolt passenger car and many more. These gears are built to withstand high horsepower and to survive under extreme conditions.

Off-Road

Whether you're trail riding, desert racing or rock crawling, Yukon has the ratio to help get you over the toughest terrain. We offer a wide variety of applications and ratios for your off-road vehicle. From the AMC 35 to the Dana 60 (seen below), only the best materials and the latest technology are used in manufacturing Yukon ring and pinion sets. Yukon gears are engineered to compete, engineered to win.

In our never-ending quest to be the best, we are always looking to provide better products than are currently available on the market. Looking for top quality replacement axle shafts? Not only do we manufacture top quality, popular Axles, but we also carry a giant selection of hard-to-find Axles.

OEM Replacement Rear Axle Shafts

Many people don't realize that over time Axles wear out and need to be replaced. Yukon manufactures OEM Axles to fit most domestic rear-wheel-drive passenger cars as well as 2WD and 4WD pickup trucks and SUVs. Yukon's performance rear Axles are heat-treated deeper than the factory axle shafts to ensure added shaft strength and durability in the bearing and seal area.

High Performance Rear Axles

Rear Axles are one of the most important parts of a hot rod or extreme-built 4x4. A weak axle can leave you stranded when you least expect it, so don't compromise. Get the best, get the Yukon advantage. Yukon's high-performance rear Axles are made from high quality 1541H and 4340 Chromoly steel. These Axles are engineered to stand up to the extreme conditions of hard street driving, trail running or weekends at the track.

4340 Chromoly Front Axles for Spicer 30, 44, 60 & GM 8.5

If you're looking for strength and durability, we can help. Yukon Replacement Chromoly Front Axles for Spicer 30, 44, 60 and GM 8.5 are made from only the best steel available and are engineered to withstand the most extreme off-road conditions. Yukon Chromoly Axles use a state of the art, dual heat-treating process to provide maximum strength and long life. This dual heat-treating along with the high-quality material gives you a 35-40% strength increase over stock axle shafts. We offer these shafts for a wide variety of applications from Jeep CJs to straight-axle full-size one-ton pickups.

Drive Flange Kits

The demands of extreme off-roading push vehicles to their limits, and while locking hubs are a good option for daily driven vehicles, dedicated off-road rigs often require drive flanges to stand up to the abuse of tall tires and big power. Our Yukon Hardcore™ flange kits are designed with these vehicles in mind. The drive flanges are manufactured from heat treated 8620 steel for maximum strength. Each kit comes complete with drive flanges, spacers, caps and all small parts for both sides. Kits are available with Yukon "Y" engraved caps or bare.

Applications include:

- D44 w/19 spline outers
- D44 w/30 spline outers
- D60 w/30 spline outers
- D60 w/35 spline outers

Engineered to withstand the most extreme off-road conditions for the ultimate in durability & strength.

Hardcore Locking Hubs®

These heavy-duty lockouts feature all steel construction, including Chromoly internals, for the ultimate in durability & strength. The Hardcore Locking Hubs will not disengage under high torque applications and defaults to the locked position under use. Engagement comes from just a 1/3 turn of the all-steel, low-profile bezel. The Hardcore Locking Hub is not only great looking, but features a low-profile design to minimize impact with obstacles, and a proprietary coating on the locking gears for decreased friction & long life. Hardcore Locking Hubs are an easy, bolt-on installation for all spline Dana 30, Dana 44, Dana 50, Dana 60. All Hardcore Locking Hubs feature a lifetime warranty against defect.

4340 Rear Axles

If you need extreme duty full float Axles, then it's time to upgrade to our line of 4340 Chromoly rear shafts. These shafts are dual heat treated and use the highest quality alloys to give you a shaft that is up to 37% stronger than other aftermarket Axles. Each cut-to-length axle contains up to six inches of splines, allowing for usage in a variety of applications.

Applications include:

- D44 in 30, 32 & 35 spline
- D60 30 spline
- D60, D70 & D80 in 35 spline
- D80 in 37 spline
- Ford 8.8" in 31 spline
- GM & Chrysler 11.5" in 30 & 38 spline
- GM 14 bolt in 30 spline
- Model 35 in 27 & 30 spline

Whether you're involved in truck pulling, extreme off-roading or drag racing, these Axles are built to take the performance of today's powerful diesel engines and tall tires.

4340 Chrome-Moly Rear Axles

OEM Replacement Front Axles

If you're just looking to get your Jeep or your 4x4 pickup back on the road and aren't in need of the brute strength of Chromoly Axles, Yukon has you covered here too. We stock a huge selection of OEM replacement Front axle shafts and axle assemblies with the U/Joint already installed. We also offer a wide variety of hard-to-find and discontinued Front axle shafts to help keep your old iron moving down the road.

Yukon Front Axles for Spicer Applications

Spin Free Kit

Unit bearings are becoming more and more common in late model trucks. The problem with unit bearings is their cost to replace. They do not stand up to the demands of heavy loads or towing and when they fail; the cost far exceeds a standard tapered roller bearing design. The Yukon Spin Free Kit answers this problem by replacing the unit bearings with a standard design, and also includes premium lock out hubs to give the driver the ability to lock and unlock the Front Axles. Each kit comes complete with all the necessary components to make the conversion, including new brake rotors, spindles, bearings & races, 4340 Chromoly outer Axles, dust shields & slingers, premium locking hub set and hardware. Spin Free kits reduce the cost of maintenance and improve fuel economy! Unit Bearing Eliminator kits are available for a variety of Jeep, 1/2-ton and 1-ton applications.

Yukon Dropouts

Yukon works hard to stay on top of the differential world as an innovator. One area we have found that we can make a difference is with drop-outs. Currently we offer three performance drop-outs, but keep an eye out for new units. We are always adding part numbers to our ever-growing product lines.

Chrysler 8.75" Nodular Iron 489

8.75" drop-outs are becoming harder and harder to find as the years go by, but they remain a very popular unit for Mopar projects. After many requests for used cores, Yukon decided a reproduction unit of the 8.75", 489 case should be built. Taking a close look at the factory unit, we found weaknesses that could be corrected. First, material was added to the bearing caps to allow less deflection under load and increase resistance to breakage and cracking. Second, high-strength billet side adjusters were used in place of the factory stamped-steel units. The last and most important improvement was to build the case out of high-strength nodular iron to hold up to the increasing horsepower of today's engines. To easily distinguish our 8.75" drop-out from the other units (741 and 742) a factory stamping-number is placed on the side of the case.

Ford 9" Aluminum

The aluminum available today is vastly different from that of years past. Technology has made aluminum products stronger and more durable. Knowing this, we at Yukon decided to have an aluminum Ford 9" dropout case built, including designs with a load-bolt. You may say to yourself, "That's nothing new, other companies have been making them for years," and that's true; but as in every Yukon product, we look closely at what's out in the marketplace and how it can be improved. Our Alum.s are made from A356-T6 aluminum, our bearing caps are one-piece & forged, with a through bolt design and extra material is added to the bearing caps. This results in 50% less deflection that can occur with other units on the market. These cases are offered in both 3.062" and 3.250" bearing diameter to accommodate 28, 31, 35 and 40-spline carriers and spools. Load-bolt designs also available.

Ford 9" Aluminum

Ford 9" Nodular Iron Race Case

Need the ultimate Ford 9"? Our nodular iron race case is cast from super-strong D451 nodular iron. After casting, it is heat-treated and stress-relieved for strength. We spent a lot of time looking for possible weaknesses. After much testing we found that, under extreme loads, other bearing caps flexed, which adversely affects the contact between the ring and pinion. To reduce flexing, we had our bearing caps forged out of 4140 Chromoly, added more material for extra stiffness and designed for 5/8" bolts. To top off this unit, billet machined side adjusters are used. These extras truly make this Nodular case the ultimate Ford 9" case, rated to 1200 horse power. Like the aluminum unit, the nodular case is offered in both 3.062" and 3.25" bearing diameters to accommodate 28, 31, 35 and 40-spline carriers and spools. Load-bolt designs are also available.

Toyota 8" & V6

Early Toyota factory drop out cores are getting increasingly difficult to come by. To solve this Yukon offers brand new center sections for Toyota 4WD trucks '79-'94 with 4 Cylinder engines as well as '86-'94 with V6 engines. These units are manufactured to factory specifications for easy setup, and the V6 version has the provision for the ABS sensor.

Keep an eye out for new units. We are always adding part numbers to our ever-growing product lines.

Yukon Spools

The unfaltering traction that comes from a spool can provide the competitive advantage both on the strip and off-road. For your spool needs, look no further than Yukon.

Toyota 8", 4 Cylinder & V6

Yukon's performance spools are precision machined from high-quality steel and heat-treated for maximum strength. These spools for Toyota applications are designed to provide bullet-proof traction on the trail and stand up to the abuse of tall tires & extreme off-roading. When strength and simplicity are the highest priority, you can't miss with Yukon performance spools. These units are available for both 4 cylinder & V6 applications.

9" Steel & Lightweight Steel

If you are in need of the no-hassle traction that you can only get from a spool, Yukon again has you covered. Our 9" steel spools are made from high-quality 4130 Chromoly steel and heat-treated better than those of the competition. Yukon offers three different versions to suit your needs: a standard non-lightened steel (8 lbs) & lightweight steel (5.9 lbs). Lightweight steel gives you a lighter rotating mass than standard steel without compromising strength.

D80 Spools

The performance of today's diesel engines is taking drastic leaps forward. With huge horsepower & torque at their fingertips, the diesel drag racing & truck pulling sports are taking off like never before. Spools offer a bullet-proof traction solution for both, and we've just released spools for both the D80 housing, in 35 & 37 spline. Combine these spools with our 4340 rear float Axles for the latest and greatest in strength for full floating rears.

Off-Road

Yukon also offers spools designed specifically for off-road use. These spools are built with strength as the first priority. We offer off-road spools for many other applications such as Spicer 44 and 60, Jeep Model 20 and GM 12-bolt truck.

Yukon Performance

Drag racing is an ever-growing motor sport, and its supporting products are also evolving. One thing that never changes, however, is the need for serious traction. Yukon can fill that need with our vast line of performance spools. We currently offer spools for the following applications: GM 8.5", 28, 30 and 33-spline; GM 12-bolt passenger, 30 and 33-spline; GM 12-bolt truck, 30-spline; 8.75" Chrysler, 30, and 35-spline; Ford 8.8", 31-spline; and Ford 9", 28, 31, 33, 35 and 40-spline.

For needed traction provided by a spool using a c-clip style rear end, a full spool is out of the question. There is a lack of a provision for the c-clips that hold in the Axles. This is where a mini spool is a must. A mini spool gives you the unfaltering traction of a full spool. It slips into the factory-open carrier, replacing the spider gears, and allowing you to use the factory c-clips on the Axles.

Zip Locker®

If you're looking for the latest in on-demand traction, then the Zip Locker is for you. The Zip Locker is an air operated locking differential designed with severe off-road use in mind. Its 8620 case & 4320 steel internals provide maximum strength against failure and give you piece of mind on the trail. Each unit comes with a variety of small parts for installation and operation, including air line & fittings, seal housing, shims (if applicable), operation switch with Front & rear covers, zip ties and more. A variety of air sources can be used for operating the Zip Locker, including air compressors or on-board air systems. Yukon also offers an industry-first "competition series" Zip Locker that defaults-to-lock if the air pressure is interrupted for any reason. Competition series units are available for Dana 60 in 35 spline.

Grizzly Locker®

Mechanical positive-locking differentials have been the staple for drag racing, circle track racing, off-road use and a variety of other performance applications for decades. We're proud to introduce the Grizzly Locker, the latest in locking differentials. The Grizzly Locker features an 8620 case, forged 8620 internals and a patented design which reduces common locker failures. The inner clutch teeth have an improved design, with a larger radius at the base, improving strength over back-cut designs. Larger teeth help to avoid breakage against shock-loading or in the event an axle breaks. The internals are hand fitted, for faster engagement. These units provide maximum traction and strength for many performance applications. Grizzly Lockers are available for a variety of car & truck applications, with new applications being added all the time!

Grizzly Locker®

Yukon has parts to meet the needs of every performance-minded auto enthusiast. In many cases, these parts are designed to replace OEM units that may be discontinued or hard to find. They are made from higher quality metal than their OEM counterparts and use readily available off-the-shelf internals for easy rebuilding years down the road.

Ford 8" & 9" Heavy-duty Trac Loc

Companies have tried to reproduce the factory Ford 8" and 9" Trac Loc with limited success. Yukon took on this project by looking for ways to make it better. By designing a thicker 1541H billet hat that added more strength, we eliminated the need for clutch guides that tend to break, sending debris into the gears. The top half is made from forged steel for strength and durability. All of our 8" and 9" units are assembled with genuine Raybestos® clutches for long life. We offer a "race" version that is built for maximum traction. This configuration tends to chatter when cornering, so if you're looking for something smoother we also offer a "street" unit that allows excellent traction with smooth, chatter-free cornering. Yukon offers the 28 and 31-spline for the Ford 8" and 28 and 31-spline for the Ford 9".

Yukon Performance Driveshafts

Yukon Performance Driveshafts offer the highest quality upgrades for your driveshaft needs. Each shaft features premium universal joints and driveshaft components that are engineered to meet the high performance requirements. The driveshaft assembly is held to strict tolerances then precision welded and computer balanced to provide exceptional performance and longevity. Yukon Performance Driveshafts are available off-the-shelf for all Front and rear Jeep JK, TJ, LJ, & CJ applications. Custom driveshafts can be made-to-order for racing, off road, and other custom applications.

Yukon Super Joints®

Looking for the ultimate in off-road performance? Yukon offers two sizes of its super-strong replacement axle U/Joint s to fit 8.5" GM Fronts, Spicer 30, 44 & 60. The bodies are made from forged m43400 Chromoly which is through hardened for ultimate yield and tensile strength. After hardening, the body is then coated with a "Diamond Like Coating". This coating provides an extremely hard surface to protect against wear. The caps are made from cold-extruded 4140 Chromoly. They are then induction-hardened to provide maximum strength without becoming brittle. This design doesn't utilize needle bearings so it relies on offset hardnesses to protect against wear. With this design, the caps will wear out first and can be replaced at a lower cost than buying a new U/Joint . Yukon offers a lifetime warranty against breakage of the body cross-section only. Yukon Dura Grip® Positraction

The four-spring clutch-style positraction has been around for years because of its great reliability and rebuild-ability. Because of its popularity Yukon has released its version – the Yukon Dura Grip. It's available for all popular GM and Ford applications, and more applications are arriving all the time. Dura Grip units are assembled with heavy-duty 4320 Chromoly spider gears and composite clutches for reduced chatter, and they are fully rebuildable. Yukon chose the 4-spring design because of its race-proven background and years of use by GM.

Yukon Yokes

The yoke is one of the most important components of your axle, so you need to make sure you purchase the one that best suits your needs. Yukon offers over 200 part numbers for a wide variety of applications, from racing to street. Yukon yokes are available in billet aluminum, billet steel, forged steel and OEM replacement.

OEM Replacement Yokes

Over time yokes tend to get a groove worn into them from the pinion seal, allowing messy leaks and possible failures. To keep you up and running leak free, Yukon carries OEM replacement yokes for a wide variety of applications; from that old restoration project to your late model car or truck. We keep a huge inventory of yokes in stock to fit your needs.

Heavy-duty Billet & Forged Pinion Yokes

When building rear ends for race cars or trucks, people tend to forget that the yoke is the one piece that ties it all together. They just reuse the old, beat-up OEM cast iron yoke. A forged yoke can mean the difference between winning and losing. Understanding that being first across the line is what it's all about, Yukon stepped up and created a full line of super-strong forged and billet yokes. These yokes offer maximum strength for high horsepower cars as well as a sleek look for that show finish.

Billet Aluminum Pinion Yokes

Looking to save some weight with minimal strength loss and get that finely polished show quality look? Yukon keeps a variety of aluminum yokes for Chrysler 8.75", Ford 9", and GM 12 bolt rear ends. Our aluminum yokes are made from high-quality 7075 billet aluminum and have the show finish you're looking for.

Yukon Diff Covers & Recovery Gear

Hardcore® Diff Cover

Give your rig the protection it deserves. The Hardcore Diff cover for the Dana 44 and Dana 60 is manufactured from high strength nodular iron and features an extremely thick-walled design for maximum resistance to damage. It comes with a magnetic drain plug to keep particulates out of the gear oil and bearings and has a durable powder coat finish for years of long life.

Applications include:

- YHCC-D30 [29103] Hardcore Diff Cover for Spicer 30
- YHCC-D44 [29101] Hardcore Diff Cover for Spicer 44

Yukon Recovery Gear

Yukon now offers the latest in recovery gear for the trail. The Yukon Recovery Gear Kit includes kinetic recovery rope, a soft shackle, two d-rings and a pair of gloves. All held in a durable duffel bag. The Yukon kinetic recovery rope is made of durable double braid nylon rated up to 28,600 lbs. that stretches up to 30% under load, multiplying the pulling capacity of the vehicle. The Yukon soft shackle is lighter and stronger than comparable steel shackles and is rated to 35,000 lbs. All items are available as a kit, or as individual components.

Individual items:

- YRGBAG-1 [22007] Recovery gear bag
- YRGGLOVES-1 [22008] Recovery gear gloves
- YRGRR-01 [22003] 7/8" kinetic rope, rated to 28,300 lbs.
- YRGRR-02 [22002] 3/4" kinetic rope, rated to 19,000 lbs.
- YRGS-01 [22001] 3/4" d-ring shackle, rated to 9,500 lbs.
- YRGS-02 [22004] Extreme soft shackle, rated to 35,000 lbs.

Kits:

- YRGKIT-1 [22005] Yukon recovery gear kit with 7/8" rope, rated to 28,300 lbs.
- YRGKIT-2 [22006] Yukon recovery gear kit with 3/4" rope, rated to 19,000 lbs.

Front Spindles

Yukon Front spindles are manufactured from high quality steel and are machined to meet or exceed OEM specifications. The bearing journals are heat-treated for high strength and longer life. Yukon Front spindles are available for Spicer 30, Spicer 44, Spicer 60, GM 8.5" & Model 35 Fronts. All Yukon spindles come with the needle bearing installed and come with the dust shield and seal.

YY F900633 [41061]	1350 U/Joint, Daytona design, 35 spl, billet
YY F900634 [41189]	1350 U/Joint, w/pulley for oil pump
YY F900642 [41063]	1350 U/Joint, Daytona design, 28 spl, alum
YY F900653 [41147]	Female coupler, 35 spline
YY F900654 [41148]	Male coupler, 35 spline
YY F900662 [41064]	1350 U/Joint, Daytona design, 28 spl, forged
YY F900663 [41065]	1350 U/Joint, Daytona design, 35 spl, forged
YY UB-F9-1310 [41112]	1310 & 1330 U/Bolt kit

Shim Kits

Part #	Description
SK 72921 [55030]	Pinion preload shim kit
SK CSF9-2PIECE [55041]	Crush sleeve eliminator kit, 2-piece design
SK CSF9-BIGPIN [55042]	Crush sleeve eliminator kit, 35 spl pinion
SK F9 [55056]	Pinion depth shim kit
SK F9-7/16 [55057]	Pin depth shim kit, 7/16" pinion support bolts

Small Parts

Part #	Description
YB F9-CONV [18046]	Conversion brg to run small brg axle in large brg housing
YB PB-002 [18042]	Pilot bearing
YB PB-006 [18045]	High-load pinion bearing, 0.652" wide
YP B3/8X1.25SW [32108]	Pinion support bolt, safety wire design
YP B3/8X1.75SW [32109]	Pinion support bolt, safety wire design
YP DOF9-01 [32139]	3.062" side adjuster
YP DOF9-02 [32140]	3.250" side adjuster
YP DOF9-03 [32141]	Adjuster lock for nodular iron dropout
YP DOF9-04 [32142]	Adjuster lock for aluminum dropout
YP DOF9-05 [32143]	Star washer for 3.062" design
YP DOF9-06 [32144]	Star washer for 3.250" design
YP DOF9-08 [32146]	Pilot bearing retaining clip
YP DOF9-10 [32149]	Adjuster lock bolt
YP DOF9-12 [32338]	Dropout housing stud, 3/8"
YP DOF9-CONV [32157]	Conversion race to use small brg carrier in lrg bearing D/O
YP F9HE-1 [32159]	Housing ends, 1/2" holes
YSPBLT-083 [33575]	T-bolt

YUKON SPIN FREE® KITS

OVERVIEW OF A YUKON SPIN FREE KIT

The Yukon Spin Free Kit replaces the vulnerable & expensive factory unit bearing with standard tapered roller bearings. The tapered roller bearings reduce drag, increasing fuel economy, and are much less expensive to maintain than the factory unit bearings. The kit also adds Yukon Hardcore® Locking hubs which provide driving selectability & reduces wear on other components. 4340 Chromoly outer stubs are included with the kit, increasing overall strength of the Front end. The end result is a vehicle that drives & handles better, gets better fuel mileage & is more affordable to maintain.

PRODUCT ADD-ON OPPORTUNITIES

The Yukon Spin Free Kit is a 100% complete kit including all hardware, bearings, seals & small parts for installation. There are no additional parts or products needed or necessary for the upgrade.

ANATOMY OF A YUKON SPIN FREE® KIT

INSTALLATION KITS

OVERVIEW OF AN INSTALLATION KIT

Having all the right components and small parts for a differential rebuild is essential. A complete differential overhaul requires the use of a master overhaul kit, which contains all of the essential, high quality, components necessary for a rebuild. Some lesser jobs can be done with a less complete kit, such as a bearing or pinion installation kit.

PRODUCT ADD-ON OPPORTUNITIES

When an installation kit is sold, it is beneficial to sell axle bearings and seals since you will have everything opened up.

This is a great opportunity to replace the bearings and seals on your axle shaft to insure optimal performance of your differential.

AXLE BEARINGS & SEALS

ANATOMY OF A KIT: MASTER OVERHAUL KIT

** actual parts may vary per kit*

THREAD LOCKER:

Ensures the ring gear bolts will not come loose during operation.

MARKING COMPOUND:

Allows for the gear pattern to be read during set up.

PINION SEAL:

Seals the pinion yoke to the housing.

SHIMS:

Allow for adjustment of the ring & pinion set and carrier.

BEARINGS & RACES: Every differential has pinion bearings & races along with carrier bearings & races.

COVER GASKET:

Seals the differential cover to the housing.

PINION NUT:

Retains the pinion yoke to the pinion gear.

CRUSH SLEEVE:

Sets pinion bearing preload. A critical setting during set-up.

RING GEAR BOLTS:

Lock the ring gear to the carrier.

ZIP: AIR OPERATED LOCKER

OVERVIEW OF A ZIP LOCKER

If you're looking for the latest in on-demand traction, then the Zip Locker is for you. The Zip Locker is an air operated locking differential designed with severe offroad use in mind. Its 8620 case & 4320 steel internals provide maximum strength against failure and give you piece of mind on the trail. Each unit comes with a variety of small parts for installation and operation, including air line & fittings, seal housing, shims (if applicable), operation switch with Front & rear covers, zip ties and more. A variety of air sources can be used for operating the Zip Locker, including air compressors or onboard air systems. Yukon also offers an industry-first "competition series" Zip Locker that defaults-to-lock if the air pressure is interrupted for any reason. Competition series units are available for Dana 60 in 35 spline. **ASSEMBLED IN THE USA!**

PRODUCT ADD-ON OPPORTUNITIES

When a Zip Locker is sold, it is beneficial to sell a carrier installation kit.

This kit will include new carrier bearings and shims which should be replaced to insure optimal performance of the Zip Locker and make the installation easier. A complete Differential Installation Kit is also a good alternative option since it will replace all bearings and seals in the differential.

AIR INPUT HOLE: Accepts air pressure from the seal housing to engage/disengage piston cage.

BEARING JOURNAL: Accepts air pressure from the seal housing to engage/disengage piston cage.

CASE: Houses the spider gears and clutches.

SPIDER GEARS: Allows for open differential operation when unit is not engaged.

PISTON CAGE: Travels back and forth in case to lock/unlock spider gear assembly.

RING GEAR DECK:

GRIZZLY: MECHANICAL LOCKER

OVERVIEW OF A GRIZZLY

Yukon Grizzly Locker is an automatic, speed sensing locker. It will lock up when there is a wheel speed difference side-to-side. They are fitted with internal components that allow for differentiation in turns. Automatic lockers are very popular in the four-wheeling world and are touted for leaving the driver to concentrate on other elements of driving and letting the locker figure out when to engage. Automatic lockers are also used on performance cars, most commonly for acceleration.

PRODUCT ADD-ON OPPORTUNITIES

When a Grizzly Locker is sold, it is beneficial to sell a carrier installation kit.

This kit will include new carrier bearings and shims which should be replaced to insure optimal performance of the Grizzly Locker and make the installation easier. A complete Differential Installation Kit is also a good alternative option since it will replace all bearings and seals in the differential.

DURA GRIP: POSITRACTION

OVERVIEW OF A DURA GRIP

The Yukon Dura Grip is a performance, clutch-style, 4-spring limited slip positraction. Steel clutch plates, half of which are covered with a friction lining material, are sandwiched behind the differential side gears inside the carrier housing. These plates are alternately tabbed to the carrier or splined to the axle shaft. The tabbed pieces are called plates and the splines are called discs. The side gears are preloaded with springs placed between the side gears. This preload provides greater traction to both Axles. In a turning situation, the Dura Grip allows a speed differential mostly because the torque loads will be low enough to allow the differential to operate.

PRODUCT ADD-ON OPPORTUNITIES

When a Dura Grip is sold, it is beneficial to sell a carrier installation kit.

This kit will include new carrier bearings and shims which should be replaced to ensure optimal performance of the Dura Grip and make the installation easier. A complete Differential Installation Kit is also a good alternative option since it will replace all bearings and seals in the differential.

SPIDER GEARS:

Allow for the Axles to turn at different speeds when turning a corner.

RING GEAR DECK:

HARDCORE LOCKING HUBS®: LOCKING HUBS

OVERVIEW OF A HARDCORE HUB

A locking hub simply disconnects the axle from the wheel hub, allowing the axle to be at rest. In vehicles that do not have manual locking hubs, even when they are in 2 wheel drive the Front axle is still turning during normal driving. The benefit of a manual locking hub is reduced wear and maintenance on Front axle components due to it no longer rotating during normal driving operation. Greater fuel economy is also seen due to reduced drag when the hubs are unlocked. Hardcore Locking Hubs feature all steel construction, a low profile bezel and selector to reduce impact with objects when traveling off-road, and a default-to-lock design in case of a failure.

PRODUCT ADD-ON OPPORTUNITIES

When Hardcore Locking Hubs are sold, it is beneficial to sell Front wheel bearings, spindle bearings, and seals.

This is a great opportunity to replace the bearings and seals to insure optimal performance for your locking hubs.

ANATOMY OF A LOCKING HUB

COUPLER & DRIVER:

Provides 100% traction to both tires while disengaging to negotiate turns.

LOCKOUT SPRING:

Preloads the locking hub assembly.

SELECTOR:

Rotates to lock/unlock the hubs.

BEZEL:

Retains the assembly to the wheel hub.

CAM SPACER:

The carrier bearing presses onto this surface.

YUKON PERFORMANCE DRIVESHAFTS

OVERVIEW OF A YUKON PERFORMANCE DRIVESHAFT

Yukon Performance Driveshafts offer the highest quality upgrades for your driveshaft needs. Each shaft features premium universal joints and driveshaft components that are engineered to meet the high performance requirements. The driveshaft assembly is held to strict tolerances then precision welded and computer balanced to provide exceptional performance and longevity. Yukon Performance Driveshafts are available off-the-shelf for all Front and rear Jeep JK, TJ, LJ, & CJ applications. Custom driveshafts can be made-to-order for racing, off-road, and other custom applications.

PRODUCT ADD-ON OPPORTUNITIES

Yukon Performance Driveshafts come with all hardware and small parts necessary for installation. We recommend associated products are inspected and replaced or upgraded where needed. The pinion crush sleeve / solid preload spacer, pinion seal, and pinion nut are the most common add on items.

Y.E.S. PLAN

The Yukon Extended Service plan is available for all Yukon Performance Driveshafts. The Y.E.S. plan is a no questions asked warranty for as long as the original purchaser owns the vehicle.
