

A.E.D.
MOTORSPORT PRODUCTS

“THE WORLD’S FASTEST METALS DISTRIBUTOR”

"Thank you for checking out A.E.D. Motorsport Products for your metal and fabrication requirements. Since 1995, we have been building our business with the support of our customers and our suppliers, all trusted partners.

Without the continued loyalty, and open willingness of our customers to share A.E.D.'s name to friends, family, co-workers and business associates, we would not have been able to grow as we have. It is an honor and a privilege to serve in this industry, and for that we are more appreciative than we can truly express in a few words.

We continue to be strong in our core products, including 4130 Chrome Moly, Docol R8, mild steel, aluminum, stainless, FK Rod Ends and much more.

Our saw-cutting and shearing services are also very popular, and we are happy to supply the material for these jobs, but our customers are welcome to do so as well.

International shipping is also very common for A.E.D. We can arrange for your material to get to you by air or sea. We ship to more than 30 countries on a regular basis. Please do not be concerned that there are thousands of miles between your door and ours!

Perhaps you noticed some of our new products as you review our website. We have recently added a wide selection of polishes, cleaners, sealants and lubricants from VALCO CINCINNATI. We are very excited about our newest addition of tube and sheet products from SSAB, a Swedish producer of specialty materials. Docol R8 tube is setting a new standard in high strength steel for chassis manufacture. So far, the response has been very positive, and as of now, we have more than 25 sizes in stock. Additionally, we now have 7 sizes of Docol sheet and Domex plate in stock, also produced by SSAB.

Safety is also becoming increasingly more important in the racing industry. We are continuing to work with laboratories and other organizations to test our key racing materials, as well as setting up crash tests to learn and share results that can improve safety among all racing series.

Please let us know how A.E.D. can be of service. We are just as comfortable working with the purchasing agent for a professional race team as we are with the weekend racer. We have a dedicated staff of professionals that are focused on helping you with whatever you need. If we are not meeting your expectations in any way, I hope you will please let me know. We will do everything in our power to make your experience with A.E.D. a positive and satisfying one.

Thank you again for your interest A.E.D. We look forward to working with you."

Purchasing Information

TUBING

Steel and alloy tubing are typically stocked in 17' to 24' random lengths. Aluminum round tube is generally stocked in 12-24' lengths and square tube in 21' lengths. You may purchase the entire length or by the foot.

BARS

Bar stock is generally stocked in 12' random lengths. Small diameter items be stocked in 6' random lengths. Bar is sold by the length or by the foot.

ALUMINUM SHEETS

Stock size on standard aluminum sheets is 48" x 144" (except Prepainted). Cut pieces are available (except Prepainted). 3003 Tread Bright sheets may be 48" x 96" or 48" x 120", depending on thickness. All cuts are based on 48" wide x 12" multiples. Example: you require a piece 16" x 37", A.E.D. will offer 48" x 24". Plate stock .190" thick and up will be cut to customer's needs. Prepainted Aluminum sheets are sold as full sheets only, 48" x 120".

STAINLESS STEEL SHEET

Stainless Sheets are typically stocked as 48" x 96" or 48" x 120", although this can change, based on availability. Cut pieces are available. All cuts are 48" wide x 12" multiples. (Example: you require a piece 16" x 37", A.E.D. will offer 48" x 24".)

NOTE ON LENGTHS AND SHIPPING

Tubing is manufactured in random lengths ranging from 17' to 24'. If you can use lengths of 8' long or less, UPS is the fastest and most economical way to ship. For best pricing, specify "full length cut to 8' plus drops." We will also cut to lesser lengths within reason. Full lengths must be taken to receive "full length pricing." For orders with pieces over 8' long, truck shipment will be required and you will receive full random lengths.

It is always most economical to purchase the entire piece or length of material, but is not required. Availability of inventory stock items may change periodically or seasonally; and in some cases, availability may be limited. Please call.

A.E.D. Motorsport Products

5373 W. 86th Street

Indianapolis, IN 46268 USA

www.aedmotorsport.com

Delivery & Shipping

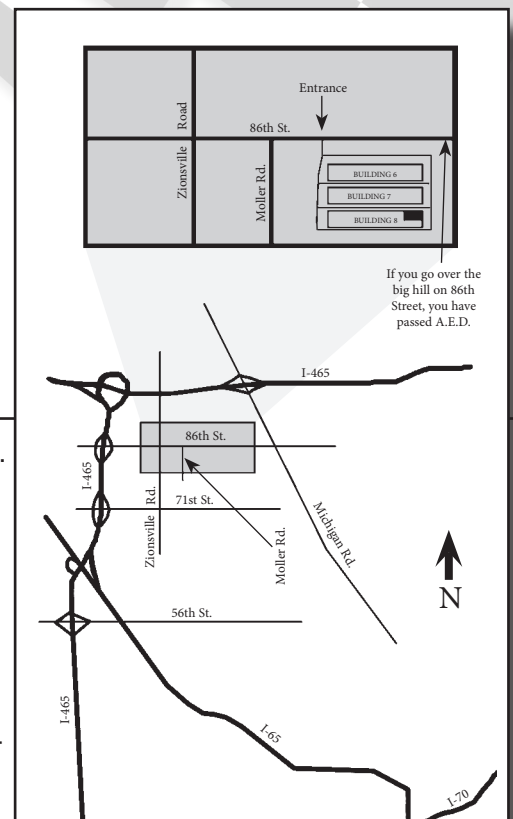

Indianapolis-area delivery is available via A.E.D. or preferred courier service. Orders placed by 1:00 p.m. from in-stock products, will ship UPS same day. Shipments scheduled on common carrier, will usually ship within 24 hours. Info is subject to change without notice.

Shipping Options

Orders under 6' have a \$10 handling charge and over 6' a \$15 handling charge. Handling charges are subject to change. Additional UPS C.O.D. charges may apply. UPS no longer accepts cash.

Additional handling charge for packages over 60". UPS orders placed by 1 pm, will ship same day. UPS chart rates based on package weight and shipping zone. Shipping charges are subject to change UPS.

Larger orders can be shipped anywhere in the U.S. via common carrier (freight collect). No Common carrier C.O.D. shipments. International orders shipped via your freight forwarder or ours. "Door to airport" methods, including UPS and U.S. mail available. Customer pickup is always welcome.

Business Policies

DISCLAIMER

The materials described and sold within this catalog are purchased to the specifications stated. Any materials sold by A.E.D. Motorsport Products are purchased by the buyer "as is" and "with any faults" and the seller makes no warranty of merchantability or fitness for any particular purpose. Please be sure you understand the mechanical requirements of your project. We are not engineers and rely on your request of materials required. Material certifications are available on most products. Certifications must be requested at time of order, and additional charges may apply.

NONDISCLOSURE STATEMENT

Due to the nature of our customers and the confidential needs of their businesses, each and every A.E.D. employee must agree to and sign a Nondisclosure Agreement. This is to assure our customers that their ideas, needs, and future plans are secure. All customer relations are regarded as strictly confidential. You, as our customer, may rest assured that your ideas, needs, and usage of material is secure within our files.

TEST REPORTS/CERTIFICATIONS

Documentation available on most products. Request for test reports/certifications must be made at time of order. An additional charge of \$15.00 per item may apply.

MATERIAL AVAILABILITY

Please be aware that not all products listed in national distributors catalogs are truly available. Please check with A.E.D. prior to finalizing your engineering plans. Many products have not been produced for many years while other items may only be produced annually or less.

PRICING

Pricing is intentionally omitted from this catalog to assure our customers the best pricing available. Due to various market changes, prices of materials may fluctuate from time to time. We re-quote at the time of order. \$25.00 minimum order.

RETURN POLICY

Any returns of material are subject to management approval and are not guaranteed. A 25% restock fee will be assessed. Absolutely no returns on special orders or cut material. A return material authorization (RMA) number is required in advance.

PAYMENT ARRANGEMENTS

A.E.D. accepts several payment options. Orders may be charged to: VISA & MASTERCARD. Please provide card name, account number, expiration date, security code, and cardholder's name and address. Checks and bank drafts are also accepted.

Orders shipped within the USA may be shipped UPS COD at customer request. Additional charges apply. Absolutely NO truckline COD shipments and NO COD shipments outside the USA. International customers may pay by wire transfer. A Processing Fee will be added to order total for each wire transfer payment accepted. Open account with Net 15 day terms may be arranged with our billing office. Please request a credit application. Personal guarantee may be required.

Of course, we will also accept cash if you are picking your order up!

Docol R8 Round Tube

Sweden-based SSAB has, together with A.E.D. Motorsport Products as the North American distributor, developed a range of tube sizes for the motorsports industry. Docol R8 tubes are certified, advanced high strength steels manufactured under tightly controlled processes. Cleaner materials are used to yield a quality product of very high strength, good formability and consistent mechanical and dimensional characteristics. Docol has been approved by SFI as an alternative to 4130 Chrome Moly and meets these SFI Specs: NHRA Top Fuel and Nitro Funny Cars - SFI Spec 2.3 & 10.5, NHRA Full Bodied Cars – SFI Spec 25.x Pro Stock, Pro Mod, Pro Street and all classes of NHRA race cars.

Typical applications

- Chassis
- Roll cages
- Suspension components
- Safety Cells

Benefits

- Material property consistency
- Very good weldability
- Narrow thickness tolerances
- Safe non-brittle break mode
- Strong
- Good formability
- Suitable for welding to 4130 and mild steel. (Use ER80S filler material)

Docol R8		VS	4130	
Property	Value		Property	Value
Tensile Strength psi	116,000 min		Tensile Strength psi	95,000 min
Yield Strength psi	100,000 min		Yield Strength psi	75,000 min
Elongation (% in 2")	13 min		Elongation (% in 2")	12 min
Diameter Tolerance	+/- .006"		Diameter Tolerance	+/- 10%
Wall Thickness tol.	+/- .005"		Wall Thickness tol.	+/- 10% of wall

The Docol R8-Series tubes are developed to provide a more state of the art alternative to 4130 Chrome Molybdenum tubes in many applications where you benefit from their consistency, tolerances and safety in combination to their very high strength. For complete metallurgical data see our website www.docolr8tube.com

Docol/Domex Sheet

Docol 800 DP

Docol/Domex are certified, advanced high strength steels developed under tightly controlled processes to ensure the most consistent product possible.

Docol R8 is characterized by:

- High yield strength/tensile strength ratio - means that stresses in highly formed regions are comparable to the stresses in slightly formed regions. Small differences in residual stresses over the cross section reduce the tendency for bending and twisting of the profile.
 - High internal cleanliness – less slag inclusions in the steel make it possible to roll form into narrow radii.
- Typical applications for Docol Roll are safety components in cars (e.g. side impact beams, bumper reinforcements and seat rails).

Note: typical mechanical properties listed in this catalog have been compiled from a variety of sources. Information is deemed reliable, but not guaranteed. Data provided for information only, NOT FOR DESIGN PURPOSES.

Product Availability

Thickness	Weight/sq. ft. (lbs)
.039	1.58
.059	2.39
.078	3.17

Typical Mechanical Properties

Property	Value
Elongation (% in 2")	10
Tensile Strength psi (min-max)	116,000-137,000
Yield Strength psi (min)*	87,000

Domex 700 MC

Domex cold forming steels are thermo-mechanically rolled in modern plants where the heating, rolling and cooling processes are carefully controlled. The extra high strength steel grades are used in applications such as truck chassis, cranes and earthmoving machines. In these applications, the high strength of the steels is used to save weight and/or to increase the payload. As a result of this and the good formability of the steels, the total costs can be reduced.

Motorsport applications include suspension members, foot boxes, gussets and clutch can liners.

Product Availability

Thickness (in)	Weight/sq.ft. (lbs)
.098	3.97
.118	4.76
.157	6.35
.196	7.94
.315	12.70

*For thicknesses over 5/16" yield min. is 98,000

Don't see it? Ask for it! We can get it.

4130 Chrome Moly Round Tube

4130, also known as Chrome Moly (short for chromium molybdenum), is a general purpose steel that has been widely used by the motorsports and aviation industries for years. Weldability, fabrication and mild hardenability make it a popular choice in all forms – tube, bar, sheet and plate.

Meets AMS-T-6736 and AMS-6360. Stocked in 17 to 24 foot random lengths; cut pieces available.

Typical Mechanical Properties

Condition N	Tensile Strength psi	Yield Strength psi	Elongation (% in 2")	Strip
Up to .035 incl.	95,000	75,000	10	5
Over .035 to .188 incl.	95,000	75,000	12	7
Over .188	90,000	70,000	15	10

Note: typical mechanical properties listed in this catalog have been compiled from a variety of sources. Information is deemed reliable, but not guaranteed. Data provided for information only, NOT FOR DESIGN PURPOSES.

Most of our 4130 Chrome Moly tubing, one of our most popular materials, is produced by Sand Springs, Okla.-based mill, Webco Industries. They are the leading producer of 4130 cold-drawn Chrome Moly seamless tubing; a product that is most often produced for structural members in aircraft. The material's outstanding high strength also make it ideal for the high performance racing industry. Webco's 4130 tubing exhibits high strength and superior ductility. These qualities are well suited for fabrication, bending and welding. It is tailored to meet demanding customer requirements in the motor-sports arena. A.E.D. may also have inventory in sizes produced by U.S. or German mills.

High Performance Streamline Tube

Since 2003, A.E.D. has offered the following previously unavailable sizes of high performance streamline “aerotube.” They are produced by roll-forming ROUND tubes through a series of rollers and dies. This process is cold-rolled, and no further processes, such as stress-relieving, are performed afterwards.

The round tubes can be 4130, Docol R8, Aluminum, Steel, Titanium (“CP Grade” is preferred) or Stainless. Wall thicknesses can range from .032 - .083, based on availability of round material. Minimum order is 10 feet of the round material and is subject to availability.

The major and minor dimensions are going to be close to the listings, but because of the variety of materials and wall thicknesses, each yields a slightly different net profile.

A.E.D.’s roll formed tubes are certified to the round tube properties only, as is customary with aerotube profiles.

Typical Mechanical Properties

Condition N	Tensile Strength psi	Yield Strength psi	Elongation in 2" Tube	Elongation in 2" Strip
Up to .035 incl.	95,000	75,000	10	5
Over .035 to .188 incl.	95,000	75,000	12	7
Over .188	90,000	70,000	15	10

4130 Sheets Normalized & Annealed

Normalized Condition meets AMS 6345, and it is sometimes referred to as "Normalized or Otherwise Heat-Treated to meet AMS 6345." It is also known as Condition "N." Normalized is the harder and stronger grade.

Annealed Condition meets AMS 6350. Annealed is the softer and more formable grade. It also known as Condition "A."

Thicknesses above .125" are typically stocked in a hot-rolled ("HR") finish, which means they may have a surface texture. This is very common in these thicknesses. 4130 sheets are stocked in 36" x 72" full sheets. Cut pieces are available.

Product Availability

1020 Mild Steel Drawn Over Mandrel Tube

DOM refers to steel round tube that is “drawn over mandrel” and is also commonly known as a seamless round tube. It is produced from a steel strip that is electric-resistance welded, then normalized and cold drawn to a smaller dimension with a thinner wall thickness, producing a seamless-like finish.

DOM tubing may be machined, formed, welded, carburized etc. Machinability is good to excellent, and weldability is excellent.

The grade is typically 1020, but may also be 520 or 1026. The 1026 grade is normally for OD's larger than 2" and wall thicknesses heavier than .156". 1020 and 1026 meet ASTM A513 Type 5. 1026 may also meet ASTM A519 and may also be referred to as Cold Drawn Seamless (CDS), DOM or Hot Finished Seamless (HFS).

Mild Steel

Electric Welded Round Tube

Mild steel tubes manufactured by the electric-resistance welding process, are often referred to as ERW or EW, among other names. These tubes have a welded seam on the inside and are typically more economical than seamless steel tubes. They may be available as cold-rolled (CR) or hot-rolled (HR) in round, square, and rectangle dimensions. A.E.D. generally does not differentiate our stock between CR and HR tubes. ERW tubes have excellent weldability and good machinability properties, as well as bending, swaging, and machining. A.E.D. stocks materials from reputable producers for structural applications, rather than furniture grade with greater deviation in mechanical properties.

A.E.D. stocks several sizes of welded steel tubing and it is produced in "random lengths" that can range between 20 to 24 feet long. The best pricing is always when you order full lengths, which can be cut for economical shipping methods. A.E.D. also offers "cut-to-size" pieces. **These tubes may occasionally be referred to as Grade 1008-1010 or 1020, and they meet ASTM A513, Types 1 and Type 2.**

Cold Rolled Commercial Quality Steel Sheet

Cold Rolled Commercial Quality Steel sheet is a general purpose mild steel that is suitable for stamping, forming, welding, and moderate drawing operations. Also available, but not kept in stock, is a Drawing Quality Steel which has greater ductility and is used for parts where severe forming or drawing is required.

Product Availability

Gage	Thickness	Sheet Size	Weight/ sq.ft. lbs

Hot Rolled Commercial Quality Steel Sheet

A.E.D. stocks hot rolled steel sheet from .187" to .375". Typically stocked "hot-rolled and pickled and oiled," but occasionally only plain hot-rolled steel is available. Pickled and oiled (P&O) sheets typically have a smoother and cleaner surface texture. Meets ASTM A36.

Product Availability

Gage	Thickness	Sheet Size	Weight/ sq.ft. lbs
3/16"	.187	48 x 120	7.66
1/4"	.250	48 x 120	10.21

1018 Mild Steel Cold Finish Flat/Round/Square Bar

1018 is a general purpose low-carbon mild steel that is relatively soft, easily weldable and formable. It has good case hardening qualities and is especially suited to cold forming and bending operations. Material is suitable for parts which require cold forming (such as crimping, swaging, or bending). Stress-relieving may be necessary to prevent cracking when attempting severe bends. **1018 cold finished bar meet ASTM A108.**

1018 steel bars are stocked in 11 to 13 foot random lengths; cut pieces available.

2024-T3 Aluminum Bar, Sheet and Plate

2024 Aluminum: high strength, fatigue-resistant for structural applications in motorsports and aircraft industries; good machinability. Good corrosion resistance in non-industrial, poor for marine use. A.E.D. Typically stocks 2024 Round, Flat, Square and Hex Bars in extruded form (T3511), which meets Federal Specification QQ-A-200/3. Cold finished (T351), which meets QQ-A-225/6, may also be available on request. Stocked in 12 foot lengths.

A.E.D. typically stocks 2024 plate in bare form (T3/T351), which means it meets Federal Specification QQ-A-250/4. Stocked in full sheets (48" x 144"). Cut pieces available. Other sheet and plate sizes may also be available on request, as well as Alclad, which meets QQ-A-250/5. Cladding provides superior corrosion resistance.

Generally, 2024 is not a weldable alloy.

Note: The Typical Mechanical Properties listed have been compiled from a variety of sources. Information is deemed reliable, but not guaranteed. Data is provided for information only, NOT FOR DESIGN PURPOSES.

3003-H14 Aluminum Sheet

3003 Aluminum: general purpose aluminum, moderate strength, good workability and weldability, excellent corrosion resistance; non-heat treatable, may be deep drawn, welded or brazed. Also available in Tread Bright and 3105 Preprinted

A.E.D. Stocks 3003 Sheet in H-14 Temper, which meets federal specification - QQ-A-250/2. Stocked in full sheets (48" x 144"). Cut pieces are available - Other thicknesses and tempers may be available upon request. Used for body work, floors, and fluid tanks.

Product Availability

Thickness	Weight/sq.ft lbs

3003 Aluminum Tread Bright

A.E.D. stocks 3003 treadbright patterned sheet in .063" and .125" thicknesses. Full sheets and cut pieces available 48" wide x 12" increments. 6061 treadplate also available for order.

Product Availability

Sheet Size	Weight	SKU
0.063 x 48 x 120	1.01	330STP063120
0.125 x 48 x 96	1.92	330STP12596

Typical Mechanical Properties

Tensile Strength psi	Yield Strength psi
23,000	20,000

3105 Prepainted Aluminum Sheet

A.E.D. stocks pre-finished aluminum sheet in a variety of colors. Typical applications include signage, body panels, pit equipment, and trailers. Sheets are .040" x 48" x 120" and sold by the FULL SHEET only. Additional colors, sheet sizes, and thicknesses are available on a special order basis.

New colors in stock now!

- Super bright white on super bright white (same color on both sides)
- Gloss black on white
- Gloss black on gloss black
- Matte black on matte black
- Chevron blue on Chevron blue
- Yellow on white
- Orange on white
- Pepsi blue on white
- Chevron blue on white
- Heron blue on white
- Red on white
- Extreme red on white
- Bright clear anodized (mirror-like)

Typical Mechanical Properties

Thickness	Weight/sq ft lbs
.040	.576

5052-H32 Aluminum Sheet

5052 Aluminum: highest strength grade of aluminum of non-heat-treatable alloys; higher fatigue strength, excellent resistance to salt water atmosphere, excellent weldability and workability, and excellent finishing characteristics. Anodic coatings are bright and clear. Sheets are 48" x 144". Meets ASTM B209-10 and QQ-A-250/8.

Product Availability

6061-T6 & 6061-T4 Aluminum Sheet

6061 is one the most versatile of the heat-treatable aluminum alloys. It has good formability and weldability, as well as high corrosion resistance. Additionally, 6061 offers a wide range of mechanical properties and can be fabricated by many of the commonly used techniques. 6061 is the most economical of the heat-treatable aluminums.

A.E.D. stocks 6061 sheet in two tempers: 6061-T6 & 6061-T4. Both meet Federal specification QQ-A-250/11. T4 maintains many of the strength characteristics of T6, but adds a great deal of forming capability. T4 is generally more formable than T6, and stronger than the non-heat treatable grades of aluminum (3003, 3052). Stocked in full sheets, 48" x 144"; cut pieces available. **The Typical Mechanical Properties listed have been compiled from a variety of sources. Information is deemed reliable, but not guaranteed. Data is provided for information only, NOT FOR DESIGN PURPOSES.**

6061 is the most versatile of the heat treatable aluminums. It offers a wide range of mechanical properties and corrosion resistance. 6061 can be fabricated with many of the commonly used techniques.

The Typical Mechanical Properties listed on page 20 have been compiled from a variety of sources. Information is deemed reliable, but not guaranteed. Data is provided for information only, NOT FOR DESIGN PURPOSES.

Stocked in 12 foot lengths

6063-T5/T52 Extruded Square/Rectangular Tube

6063 Aluminum: architectural alloy, developed primarily for extrusions, relatively high tensile properties, excellent finishing characteristics, and high corrosion resistance.

Meets Federal Specification QQ-A-200/9

Stocked in lengths 21' 1"; cut pieces are available. Sizes besides those listed below are also available generally in full lengths.

Typical Mechanical Properties

Property	T52

6061 & 6063 Aluminum Angle

6061 Aluminum: good formability, weldability, high corrosion resistance; the most economical of the heat-treatable aluminums.

6061 Angles are generally stocked in 25-Foot Lengths. Cut pieces are available; and other sizes are available upon request in full lengths. Meets Federal Specification: QQ-A-200/16

6063 Aluminum: architectural alloy, developed primarily for extrusions, relatively high tensile properties, excellent finishing characteristics, and high corrosion resistance.

6063 Angles are generally stocked in 16-Foot Lengths. Cut pieces are available; and other sizes are available upon request in full lengths. Meets Federal Specification: QQ-A-200/9

6063 Typical Mechanical Properties

Property	T52
Tensile Strength psi	27,000
Yield Point psi	21,000
Elongation (% in 2")	12
Brinell Hardness	60

The Typical Mechanical Properties listed have been compiled from a variety of sources. Information is deemed reliable, but not guaranteed. Data is provided for information only, NOT FOR DESIGN PURPOSES.

7075-T6 Aluminum Plate

7075 Aluminum: one of the highest strength aluminum alloys used for highly stressed parts where strength is extremely critical, good machinability, excellent strength-to-weight ratio, only average corrosion resistance; improve resistance is normally obtained by cladding parts. Sometimes used in place of 2024. Grain direction should be considered for high stress applications. 7075-T6 bare meets QQA-250/12 and 7075-T6 Alclad meets QQA-250/13.

Typical Mechanical Properties

Lead Sheet

Lead is a soft, malleable metal material with high corrosion resistance, generally used to add weight. Its mechanical properties are rather low in comparison to other metals when used in a structural application. Meets ASTM B29.

A.E.D. offers common lead sheet, which is essentially 99.9% pure, in 24" x 24" sheets in .125" and .250" only. It is also sometimes referred to as "Lead Ballast."

Product Availability

Size	Approx. Weight per sheet
.125 x 24 x 24	30 lbs
.250 x 24 x 24	60 lbs

Typical Mechanical Properties

Property	Value
Tensile Strength psi	1740
Yield Strength psi	7978
Elongation (% in 2")	30
Hardness Brinell/Rockwell HR	3.2-4.5

Sold in Full Sheets
(24" x 24") ONLY.

6AL-4V Titanium Round Bar

Titanium is an amazingly lightweight metal, approximately 60 percent of the density of steel, with outstanding corrosion resistance. Its unprecedented strength and high melting point of more than 3,000° F make it an obvious material choice for aircraft and motorsports industries. Please make sure you understand the unique characteristics of welding and fabricating Titanium materials. The buyer is responsible to know their application. 6AL-4V is typically supplied in the annealed condition, per ASTM B348 or AMS 4928.

Typical Mechanical Properties

Property	Value
Tensile Strength psi	130,000
Yield Strength psi	120,000
Elongation (% in 2")	10*
Reduction of area min.	25

*Elongation for materials under .025" may be obtained only by negotiation

Commercially Pure Titanium Sheet Grade 2

CP Grade 2 Commercially Pure Titanium, or "CP Gr2," is one of the most widely used titanium grades in all product forms. Sometimes referred as the "garden variety grade," CP Grade 2 provides an excellent balance of moderate strength and reasonable ductility. Additionally, it offers high corrosion resistance in highly oxidizing and mildly reducing environments, including chlorides. CP Grade 2 is typically supplied in the annealed condition.

It is important to understand that there are grades of titanium for aerospace and for non-aerospace applications. Aerospace grades meet "AMS" specifications and non-aerospace grades meet ASTM specs. The same material may be approved for one type of application, but not necessarily for others. Our stock of CP Grade 2 sheets are the non-aerospace grade, although we can and often supply the aerospace grades by special order. It should also be noted that "CP Grade 2" is not the same as "CP-2", which is an aerospace grade. Our stock of titanium sheets are commonly produced in 48" x 120" dimensions. The best pricing is always when you order full sheets, which can be cut for economical shipping methods. AED also offers "cut-to-size" pieces. This material meets ASTM B265.

4340 Chrome Moly Round Bar

4340 is nickel-chromium-molybdenum alloy steel. It is ideal for highly stressed parts, and it can attain much deeper hardenability than 4100 series steel. 4340 also has excellent non-distorting properties for an alloy steel, with high fatigue/tensile ratio and the capability to maintain strength, ductility, and toughness at relatively high temperatures. Meets MIL-S-5000, AMS-6415, and others. A.E.D. stocks several sizes of 4340 round bar, generally in the cold finished, normalized and tempered condition. Other sizes and conditions, as well as hex, flat and square bar may also be available upon request.

Typical Mechanical Properties

Property	Value
Tensile Strength psi	110,000
Yield Strength psi	66,000
Elongation (% in 2")	23
Reduction of Area (%)	49
Brinell Hardness	197

300M Steel Alloy Round Bar (E4340 Modified)

300M is a "Modified 4340," with the addition of vanadium and a higher silicon content, it offers a combination of toughness and ductility at high-strength levels. 300M is a deep hardening steel with excellent torque properties, high fatigue and creep characteristics, and maintains its strength at moderately high temperatures. Meets MIL-S-8844, and others. Stocked in 11-13 foot random lengths; cut pieces available. Other sizes may be available on request.

1144 Stressproof™ CF Round Bar

1144 Stressproof is a carbon-manganese free machining grade, severely cold worked to produce high tensile properties. It is a specially treated grade to relieve the stresses set up by the cold working, and therefore reducing warpage tendencies after machining, which is common in ordinary cold drawn bars. Meets ASTM A311, Class B. Stressproof™ is a registered trademark of the LaSalle Steel Co. Stocked in 11-13 foot random lengths; cut pieces available. Other sizes may be available on request.

Typical Mechanical Properties

"E.T.D." 150™ CF Alloy Round Bar

ETD150 is 4100 H modified alloy steel, with high tensile and yield strength properties. Produced by Elevated Temperature Drawing, problems of warpage and distortion, as well as residual stresses from cold working with a controlled-die practice, are reduced. Welding may be difficult, unless sections are preheated first, then stress-relieved afterwards. Meets AMS 6378. The "Elevated Temperature Draw process" and "e.t.d. 150"™ are patented/trademarks by LaSalle Steel Co., producers of the steel. Stocked in 11-13 foot random lengths; cut pieces available. Other sizes may be available on request.

17-4 PH Stainless Steel Round Bar

17-4 PH is in the "Precipitation Hardening" (iron-chromium-nickel) group, which develops very high mechanical properties. Features include high corrosion resistance and it can be heat-treated to high strength levels. Meets AMS 5643. A.E.D. stocks several sizes of 17-4 PH round bar. Stocked in 11 to 13-foot random lengths; cut pieces available. Other sizes, as well as flat, hex and square bar also available upon request.

304 Stainless Steel Round Bar

304 is in the "Austenitic" group (or chrome-nickel series) of stainless steels. It is not hardenable by heat-treatment and it is not magnetic. Hardness is accomplished by cold-working, which may create some magnetism). Tougher and more ductile than most ordinary steels, 304 (and other austenitic grades), also has excellent mechanical properties and weldability and good corrosion resistance. 304 stainless bars meet Federal Specification ASTM A276 and others. Stocked in 11 to 13-foot random lengths; cut pieces available.

304 & 201 Stainless Steel Round Tube

A.E.D. stocks several sizes of Stainless Steel round tube and square and rectangle tube. The round tubes are supplied in Grades 304 and 201 and could be welded or seamless (based on availability). The 304 tubes can meet several specifications including ASTM A269, A249, A213 or others, depending on welded, or seamless, as well as certain other conditions. As is common in the industry, inventory can vary depending on availability. Other sizes and specifications are available upon request. A.E.D. stocks four sizes of Grade 201 Super Buffed welded round tube, all of which are distinguished by a rich polished finish that has the appearance of chrome. They are typically used for “nerf bar” and “bumper” applications, as well as many other uses. The 201 tubes meet ASTM A554. 201 is stronger than a 304 for typical motorsport applications.

304 & 430 Stainless Steel Sheet

Stocked in full sheets, generally 48 x 120; cut pieces available.

A.E.D. stocks 304 stainless sheet in a variety of thicknesses, primarily in the #4 finish, which is a polished or “brushed” finish. The “polished” finish does NOT refer to a “mirror-type” finish. See 430 Bright Annealed (below) for “mirror-like” finish. Mill finish available on thicker gages. Meets ASTM A240 and others.

The Typical Mechanical Properties listed on this page have been compiled from a variety of sources. Information is deemed reliable, but not guaranteed. Data is provided for information only, NOT FOR DESIGN PURPOSES.

4130 Threaded Tube Adapters

Sometimes referred to as "tube ends," "bunges" or "spuds," these "weld-in" threaded tube adapters are CNC-machined from only 4130 alloy steel.

America's top chassis builders have been using them for many years. Not only are they strong and consistent, with a high quality finish, they make a perfect complement to our Rod Ends, tubing (4130, Docol & MS DOM) and Hand Tap products.

A.E.D.'s threaded tube ends are available with either right hand or left hand threads - PLEASE SPECIFY!

TUBE SIZE refers to OD x Wall Thickness.

X
S
S-R

Most of these parts are typically kept in stock

These parts are available by special order

Available by special order and produced in Right Hand Thread only

4130 Weld-In Clevises

A.E.D.'s weld-in slot clevises are machined from 4130 alloy steel and are available for a variety of tube sizes, wall thicknesses and cross bolt sizes. They have the same high quality as our tube adapters. Typical applications for these clevises include wheelie bars, wing struts or supports, seat mounts, battery mounts, parachute mounts and many other mounting needs.

		PIN OR BOLT SIZE					
		3/16" Bolt	1/4" Bolt	5/16" Bolt	3/8" Bolt		1/2" Bolt
T U B E S I Z E	SLOT WIDTH	1/8"		3/16"	1/4"	5/16"	3/8"
	3/8 x .058	x					
	1/2 x .058		x				
	5/8 x .058			x			
	3/4 x .058				x	x	
	7/8 x .058					x	
	1 x .058				x	x	x
	1-1/8 x .058				x	x	
	1-1/8 x .083					x	
	1-1/4 x .058					x	
					1-1/2 x .065		x
					1-1/2 x .120		x

To determine which size of clevis you require, please match up the size of the TUBE you need to weld in to, and then the width of the SLOT, and then the size of the BOLT.

4130 & Stainless Threaded Clevises

These threaded clevises feature rolled threads for a stronger and better fit.

4130 Alloy Steel, Zinc plated

3/8-20 thread x 5/16" hole x 3/16" slot threaded clevis

1/2-20 thread x 3/8" hole x 1/4" slot threaded clevis

303 Stainless Steel, rounded slot base for additional strength

10-32 thread x 3/16" hole x 1/8" slot threaded clevis

1/4-28 thread x 3/16" hole x 1/8" slot threaded clevis

Please specify **right** or **left** hand thread.

Steel Sleeves

Save time and money with our ready for assembly steel sleeves! All in stock sleeves are manufactured from 1020 mild steel seamless tube. Other sizes and materials are available. Please call for a quote.

Standard Sleeves	
1/2" OD x .312"	ID x 1" Long
1/2" OD x .312"	ID x 1 1/8" Long

Taps

Thread your own tubing and bar stock!

Aluminum, steel, 4130, stainless and much more! We generally have left (can be harder to find) and right hand taps in stock. Other sizes may be available upon request.

Tap Sizes
10-32
1/4"-28
5/16"-24
3/8"-24
7/16"-20
5/8"-18
3/4"-16

Rod End Tube Tap Guide

Tube	Thread
7/16" (.437") x .120"	1/4" (.250")
1/2" (.500") X .083"	7/16" (.437")
1/2" (.500") X .120"	5/16" (.312")
5/8" (.625") X .120"	7/16" (.437")
5/8" (.625") X .155"	3/8" (.375")
3/4" (.750") X .188"	7/16" (.437")

These are some of the most common conversions. Please be sure that you completely understand your application and dimensions.

FK Rod Ends & Bearings

Since 1997, A.E.D. Motorsport Products has been a stocking distributor for FK Rod Ends and Bearings, an American manufacturer of high quality bearing products for more than 20 years.

A.E.D. is proud to offer this exceptional product line to both our Motorsport, industrial and aviation (FK rod ends are not certified) customers. Previous catalog editions have featured an abbreviated listing of FK's products, however with the growing popularity of the Internet, we have posted the entire FK catalog on our web-site, complete with sizes and load ratings.

A brief listing of the various Rod End and Bearing products follows, along with a guide to help you select the appropriate series for your application.

Please visit our web-site to view the online catalog: <http://www.aedmotorsport.com/catalog/categories/fk-rod-ends-spherical-bearings>

ROD ENDS SERIES

Commercial/Industrial Rod Ends

CM/CF (2-piece Metal-to-Metal); CMX (2-piece Metal-to-Metal alloy); SCM/SCF (2-piece Metal-to-Metal Stainless Steel); and Metric 2-piece Metal-to-Metal Steel & Stainless; HCM (2-piece Metal-to-Metal High Misalignment); etc.

Precision Series Rod Ends

JM/JF (3-piece, Alloy race); JMX/JFX (3-piece High Strength Alloy); ALJM/ALJF (3-piece Aluminum); SJM/SJF (3-piece Stainless Steel); PMFT (3-piece Performance Racing); HJMXT (3-piece High Strength, High Misalignment); RJM/RJF (3-piece Precision Decorative Chrome); etc.

Extra Strength - Heavy Duty Shank

RSM/RSM-T (3-piece Low Carbon Steel); RSMX/RSMX-T (3-piece Alloy); SRSM-T (3-piece Stainless Steel); ALRSM (3-piece Aluminum); HRSMX-T (3-piece High Strength Alloy); etc.

Spherical Bearings

COM/COM-H (Commercial Series, low carbon steel); HIN-T (High Misalignment alloy); FKS (Precision Narrow Series Alloy); FKSSX-T/ FKSSX-TV/PFKSSX-T (Precision Narrow series, Stainless); WSSX-T/ WSSX-TV (Wide Series, Stainless); K (Special Purpose Series)

Special Products

Steel and Aluminum Jam Nuts, Studs, Solid Rod Ends, Clevises, Adjuster Ladders

THREE RULES FOR ROD ENDS IN RACING

1. When in doubt, always step up to the next strongest part.
2. Racing on pavement has high "G" loading, and all suspension parts should use Chrome Moly rod ends (these are the series with an "X" in their heading; ex: JMX8).
3. Dirt racing is not as hard on FK parts as pavement, and unless there is a past problem, a "CM" or "JM" series is fine to start with.

**Don't forget
about the
Rod End Seals!**

FK Rod Ends & Bearings

FK Rod Ends & Bearings offers six grades of bearing products for racing applications:

General Purpose – 2-piece style CM / CF; also available 2-pc Chrome Moly CMX

The ball rides on a formed portion of the mild steel body. Fairly high misalignment capability and good strength/cost ratio. Popular for linkage.

General Purpose – 3-piece style JM / JF

Three-piece style features a heat-treated race for the ball to ride on. Less misalignment capability than the CM / CF series. Similar in strength to the CM / CF series.

Specialty Racing Aluminum – 3-piece style ALJM / ALRSM

Made from 7075-T6 Aluminum, the ball rides on a heat-treated race, excellent for sprints and midgets, designed to save chassis in the event of a crash.

High Strength Chrome Moly or 17-4 PH Stainless Steel – 3-pc style JMX / JFX / PMX / SJM

These styles are very strong due to the use of heat-treated alloy steel, 52110 bearing steel ball. Rides on a hardened race for long life.

General Purpose Oversize Body – 3-piece style RSM

Oversize body gives extra strength; mild steel material allows a low cost part. The ball rides on a heat-treated race for longer life.

High Strength Chrome Moly or 17-4 PH Stainless Steel, oversize body – 3-pc style RSMX / SRSM

Strongest parts available due to the use of a body that is one size larger than the bore.

Material is heat-treated 4130 Chrome Moly, 52100 bearing steel ball rides on a heat-treated alloy race for long life.

All of the rod end series above feature a 52100 bearing steel ball that is precision-ground and hard-chrome plated.

If desired, most FK Bearing rod ends may be lined with aircraft-grade TEFLON between the ball and the race for a tighter initial fit and longer life due to the self-lubricating properties of the Teflon material. Some of the rod ends come standard with this liner – please consult the catalog or our web-site for final determination.

For further assistance in part selection, please contact A.E.D. Motorsport Products.

We will make every effort to guide you in making the correct selection for your application.

<u>TYPE OF RACE CAR</u>	<u>Sprint Car, Midget, Mini Sprint, Micro Sprint, TQ Midget</u>
Common Terms	Suggested Part
Tie Rod	CM / ALRSM / RSM
Drag Link	CM / ALRSM / RSM
Radius Rod	CM / ALRSM / RSM
Rear Torsion Arms	RSM / RSMX
Wing Sliders	CM

Open wheel racing is a “rough-and-tumble” sport. Aluminum “ALRSM” bearings are often used because of the weight reduction, and in the case of a crash, the rod end fails and does not tear up the frame of the race car.

NOTE: The following guide is a suggestion only, it is not intended as a recommendation. Your application may be different. Suggestions provided by FK Bearings.

The user accepts full responsibility for part determination. A.E.D. and FK cannot determine applications for its products.

For further assistance in part selection, please contact A.E.D. Motorsport Products. We will make every effort to guide you in making the correct selection for your application.

FK Rod Ends & Bearings

TYPE OF RACE CAR Dwarf Car, Legends

Common Terms	Suggested Part
Front Control Arms or "A" Arms, Tie Rods	CM / CMX
Rear Arms, 3-Link, Track Bar	CMX / JMX

These cars are light, simple and have lots of power per pound of weight. Their wheels stick out past the fenders (or no fenders) and the level of experience is usually lower. If you break a rod end on the front of the car, the car stops because you cannot drive it; break a rod end on the rear, and the car usually crashes into the wall. Refer to the "Three rules of Rod Ends" on Page 36.

TYPE OF RACE CAR Stock Car, Late Model, I.M.C.A. Modifieds, Sportsman

Common Terms	Suggested Part
"A" Arms, Front Control Arms	CM / CMX / JM / JMX
Rear Arms, Track Bar, "J" Bar, Panhard Bar, Watts Link, Torque Link	CM / CMX / JMX

These cars are sometimes heavier and have fenders (except IMCA). They tend to rub together rather than bang together, and do not seem to be too hard on rod ends. If a rod end fails in the front of the car, it USUALLY just stops . . . if a rear rod end breaks, the car turns right into the wall. Refer to the "Three Rules of Rod Ends" on Page 36.

TYPE OF RACE CAR S.C.C.A. Road Racer, Improved Touring, Trans-Am, Autocross, Solo 1, Sports Racer, GT Sedan

Common Terms	Suggested Part
"A" Arms, Front Control Arms	JMXT
Rear Arms, Track Bar, "J" Bar, Panhard Bar, Watts Link, Torque Link	JMXT

These cars are all road racers on pavement. The racing is amateur (no money), and the mechanical aptitude of the owners is lower as they are usually business professionals. The routine maintenance consists of washing the car and hauling it to the next event. They need a strong, long lasting part.

TYPE OF RACE CAR Drag Racer, Stock, Super Stock, Pro Stock, Super Gas, Competition Eliminator, Dragster

Common Terms	Suggested Part
4-Link, Cross Link	JMXT / RSMXT
Tie Rod, Strut Rod	JMXT / RSMXT

These cars all have huge tires and the loads on the suspension at the start are tremendous. They need the strongest part FK makes. In drag racing, repeatability is the key to winning, so most all racers want a part that will last, thus a Teflon liner.

TYPE OF RACE CAR Off-Road, Single Seater, Two Seater, Buggy, Baja Bug

Common Terms	Suggested Part
Trailing Arm, "A" Arm	JMXT / HRSMXT / RSMXT
Tie Rod	JMXT / HRSMXT / RSMXT

This type of racing through the desert is very HARD on equipment. Replacement parts are carried on the car or are very far away in various pits. They need the strongest part possible, plus the protection of Teflon. The dirt in the desert is quite abrasive, and the Teflon seems to help the wear factor. After each race, the cars are completely disassembled and every part is inspected. Suspect parts at the time are replaced.

See detailed current listing on our website or call for a complete catalog.

CM/CF 2-piece, Metal to Metal Steel

Notes: for grease fittings add "Z" to suffix
 - CM6Z
 For studs add "Y" to suffix
 - CM6Y
 For Teflon liner add "T" to suffix
 - CM12T

* Grease fittings are not supplied on these sizes
 ** Tolerance variation: "D," "A" are +/- .020

Male rod ends load ratings based on no lubricating fitting

For load ratings with lubricator, please contact A.E.D. Motorsport Products

Note: female rod ends available in most sizes and grades.

Other products available:

- Studed rod ends: call for details
- Spherical bearings
- Solid rod ends
- Clevis ends

NOTE:

This interchange table shows approximate equivalency. It is not intended that all manufacturers' products are functionally interchangeable in all applications. F.K. Bearings reserves the right to change specifications and other information included in this catalog without notice. All information, data, and dimension tables in this catalog have been carefully compiled and thoroughly checked. However, no responsibility for possible errors or omissions can be assumed.

WARNING!

The manufacturer can not determine all applications of its products. It is up to the customer to determine a suitable part for their application. For assistance, please contact A.E.D.

Rod End Seals

Rod End Seals have many applications!

From asphalt and dirt track racers, high performance suspensions to precision flaps on aircraft wings, Seals-It rod end seals get the job done. Keep dirt, water and other contaminants from damaging the performance of your rod ends. Exposed bearing surfaces let dirt in and lube out, protection is easy and immediately effective.

SIZE	A	B	C	H	T
1/4	.257ø	.375ø	.500ø	.125	.025

1.0	1.005ø	1.350ø	2.000ø	.500	.047

Firewall Grommet Seals

Grommet seals have many applications. In race cars they serve to keep unwanted smoke and fumes from entering the driver's area while protecting lines from chafing and abrading on rough surfaces. In hot rods and custom car applications, they provide the perfect "finishing touch" to all through panel installations. Wiring, fuel and oil lines, air and liquid hoses, and all other lines that make up your rod or custom, can make an otherwise detailed installation look unfinished. Seals-It grommet seals add the well-organized, professional appearance you want throughout your vehicle. Grommet seals also have many other applications including: marine, commercial equipment, motor homes, etc.

Note: "blank"-no hole seals

We recommend the use of a "cookie cutter" type of punch along with a block of wood or similar base to lay the seal on. These can be of your own making, or purchased. The use of scissors, power drills, etc, are not recommended as they can produce poor results or damage your seal.

Gauge Isolators

Don't let track conditions or suspension settings be a factor in reading your gauges. These isolators dampen vibration so you can read them easier and also increase gauge life. They're also great for fixing the occasional "oops" when making a dash panel! Available in a variety of sizes plus custom applications. Installation Tip: After placing the grommet in the properly sized hole, you may experience resistance when attempting to insert the gauge. We have found that lubricating the rubber with liquid window cleaner does the trick. Dipping a finger in the liquid and rubbing it on the opening of the grommet can accomplish this.

GAUGE GROMMET ISOLATORS

PART NO.	A	B	C	D	E
DB 206-225	2.060	2.250	2.700	.150	.930
DB 260-275	2.620	2.750	3.200	.200	1.250

Rod End Boots

Preventing rod end failures has been a high priority goal for Seals-it ever since the company's inception.

Rod End Seals were, in fact, the product that got

Seals-it into the manufacturing business many years ago. That product evolved as the result of a couple of untimely rod end failures on Seals-it founder Skip Matczak's racecars, and his commitment that it would not happen again.

In keeping with this goal, A.E.D. now offers Seals-it's RODOBAL line of Rod End Boots. In certain cases, the fully enclosed boot may best satisfy the needs of an application where anything less than complete rod end isolation from the elements will not provide the desired protection.

Protect your rod ends from the elements with these Rod End Boots from the Seals-it Company!!

Seals-it boots are available in five sizes, which can be used for either Imperial (English) or Metric rod ends. The same boot fits either a male or female rod end.

Boot Part Number	Bore Size - Imperial Rod End	Bore Size - Metric Rod End
RERS 1	3/16" 1/4" 5/16"	6mm, 8mm
RERS 2	3/8" 7/16"	10mm, 12mm
RERS 3	1/2" 5/8" 3/4"	14mm, 16mm, 18mm
RERS4	7/8" 1"	20mm, 22mm, 25mm
RERS 5	1 1/4"	30mm, 35mm

Presently, A.E.D. will be stocking only part numbers RERS 2 and RERS 3, although this may change in the future.

Lead time for other sizes to be advised at time of order.

Pipemaster Tube Templates

The welder's tool for contour fits. Now, with a simple and economic tool, you can quickly and easily draw out your tube outline to weld any shape at any angle! The template transfers the exact outline of the tube or pipe joint in just seconds! It can be used for penetration cuts. The Pipemaster Tools feature spring temper stainless steel pins, 6063 Aluminum shell and rugged ABS housing.

SIMPLE INSTRUCTIONS:

Production Saw Cutting

WE OFFER CUTTING ON 3 PRODUCTION SAWS

2 PRECISION COLD SAWS

Haberle H-300 Manual operation

Kalamazoo FS350A Fully automatic

Features: 2 speeds
Air Operated Vise
Liquid Cooled
Mitering 0 to 45 degrees

Capacities: 3.75" Round
3.50" Square

Tolerances: (+- .004") 1/4" to 17"
(+- .015") 17" to 36"
36" plus as needed

KMT 350A BAND SAW FULLY AUTOMATIC

Features: Variable speeds
Carbide blades
Mitering 0 to 45 degrees

Capacities: 11" Diameter
10.5" Square
1/4" to 20" cut lengths

Tolerances: (+- .005") tolerance
minimal drop

Call A.E.D. and discuss your saw cutting needs. Increase your yield. We provide a superior cut quality

Special packaging and handling available
10 pieces to thousands of parts

Your materials or ours
Steel, aluminum, stainless, alloys
Quick turnaround. Call for pricing.

Production Shearing

A.E.D. has processed materials for distributors and end users for many years. We offer excellent service, superior quality and custom services, processing your inventory or our stock.

1/4" x 120" Adira 1025 Hydraulic Power Squaring Shear
Capacity: 1/4" Mild Steel, 3/16" Stainless, 3/8" Commercial Grade Aluminum
40" front operated back gauge, 10" deep gap to allow shearing of sheets longer than 120".

Primeline Mechanical Shear: .125" x 96" Specifically for tight tolerances, light gauge and fragile materials.

Valco Cincinnati Consumer Products

Valco Cincinnati's growing line of products are offered to the consumer automotive market and high-performance racing industry. Valco's Consumer Products division makes sealants, adhesives, cleaners, waxes, polishes and more. A.E.D. offers a wide range of Valco Products, including Hylomar, All-in-One Silicones, Magic Mix Polishes, Lube Tube, Thread Locker, Epoxi Putty and much more! Visit our website for the full line-up of products!

Hylomar Products

All-in-One Silicone

Clip-on hooks

HV-350 Adhesive

Lenox Lube Tube

Solvent 184 Cleaner/Degreaser

Epoxi-Putty

Magic Mix Aluminum Brightener

Grip-it, Strip-it Peeler

Don't see it? Ask for it! We can get it.

Protect all valuable metals with A.E.D.'s preferred "RUST TEK 17" rust inhibitor.

Rust Tek 17 is a solvent-based, water soluble corrosion inhibitor that is easy to apply and remove. A must for long term storage! Suitable for 6 - 18 months of indoor protection. Excellent to protect your 4130 Chrome Moly tubes and sheets as **well as finished parts for shipping and storage. Packaged in 1** quart spray applicator bottles. We use this product religiously for all shipments moving overseas - especially Australia and New Zealand.

6' Tie Down Straps

Safety washers available for rod ends!

4130 Alloy
303 Stainless Steel
6061 Aluminum

WEIGHT CONVERSION TABLE

To find the weight of the metals below	Multiply the weight of plain steel by
Aluminum	0.3357
Brass (70-30)	1.0883
Brass (80-20)	1.1060
Bronze, Commercial (90-10)	1.1237
Bronze, Phosphor (95-5)	1.1307
Copper, Pure	1.1413
Gold (24 Kt.)	2.4664
HASTELLOY Alloy C-276	1.1343
INCONEL Alloy 600	1.0742
INCONEL Alloy 601	1.0283
Iron, Wrought	0.9929
Lead	1.4155
Molybdenum	1.3074
MONEL Alloy 400	1.1343
Nickel 200	1.1343
Nickel, Pure	1.1343
Platinum	2.7385
Silver, Fine	1.3392
Stainless Steel (18-8)	1.0247
Tantalum	2.1201
Titanium	0.5795
Tungsten	2.4734

Metric Units & Abbreviations

LENGTH			WEIGHT	
Unit	Abbr.	Unit	Abbr.	
1000	kilometer	km	kilogram	kg
100	hectometer	hm	hectogram	hg
10	dekameter	dam	dekagram	dag
Base Unit	meter	m	gram	g
1/10	decimeter	dm	decigram	dg
1/100	centimeter	cm	decigram	cg
1/1000	millimeter	mm	milligram	mg

COMMON CONVERSION FACTORS

Inch to Millimeters - multiply by 25.4
 Millimeters to Inch - multiply by .03937
 Feet to Meters - multiply by .3048
 Meters to Feet - multiply by 3.281
 Yards to Meters - multiply by .9144
 Meters to Yards - multiply by 1.609
 Kilometers to Miles - multiply by .6214

WEIGHT

If you know:	You can get:	If you multiply by:
ounces (avdp)	grams	28.35
pounds	kilograms	0.454
short tons	megagrams (metric tons)	0.907
grams	ounces (avdp)	0.035
kilograms	pounds	2.205
megagrams (metric tons)	short tons	1.102
pounds per ft.	kilograms per meter	1.488
