

Renewal Logistics

Our Leadership:

Courtney Folk

With almost 20 years in the Insurance Restoration industry Courtney Folk is widely known as an expert in all things apparel. Including restoration, apparel design, corrections, and packaging, to selling online in primary and secondary marketplaces. She is the Co-Owner of Renewal Logistics and Co-Founder and President of Textile Restorations. Her rise to success began by with taking a \$250,000 company to an 8 figure operation that continues to grow. This company is now the largest independently owned fabric restoration company if North America. She has been a key speaker and presenter on the subject of textile restoration and insurance claims at several Industry conventions over the years.

The Silicon Review interviewed Courtney just last year as Textile Restorations was named Best 50 Companies to watch in 2020. Along with running two other companies, Courtney is also the President of Renewal Claims Solutions, a national organization of the finest Textile Care experts in North America. Here she has brought together a diverse team of talented members to work with insurance carrier clients whose insureds need their help after a disaster.

While doing all this Courtney managed to attend and graduate from design school and currently serves as the technical director on all sewing, alterations and/or design projects handled in house at Renewal Logistics. She graduated from Charleston Southern University with a 4.0 in American History and currently resides in Atlanta, GA with her husband Bryan, and 8 year old son, Jack.

Our Leadership:

Bryan Folk

As Co-Founder of Renewal Logistics, Bryan has played a critical role in its growth and success. He takes a very hands on approach to business, which has resulted in the growth and development of (3) eight figure operations. Bryan is known for his specialty in operational and IT project management and his success in specifically managing large scale apparel and non-apparel projects.

He has managed the global logistics, and developed the workflows for customer service, order fulfillment optimization, and the strategic listing optimization for two products that have been #1 in their product categories on Amazon. One product currently has nearly 70,000 4.5 star REAL reviews, which is unheard-of. It should also be notable that Renewal Logistic's throughput of over 6 million units in 2020 maintained a near zero defect rating. Not only has he developed and implemented custom software for 4 different organizations he holds patents that are used in the apparel industry today for sanitization and odor removal. Bryan graduated from University of South Carolina with a 4.0 in both Chemistry and Biology majors, and currently resides in Atlanta with his wife Courtney, and 8 year old son Jack.

Monitoring

A History of Excellence

In 2020, Renewal Logistics shipped over 6,000,000 units with pick accuracy of 6 σ (Six Sigma).

“A six-sigma process is one in which 99.99966% of all opportunities to produce some feature of a part are statistically expected to be free of defects.”

Flexibility: Month to Month commercial storage pricing either by square footage or by the pallet space

Each project is uniquely designed to your specific goals

Superior Relationships with local labor forces: We have the capability to ramp up production and staff by 400% within 24 hours!

Inventory Management, Tracking & Reporting

Billing automation – The solution includes a billing management module that improves billing accuracy and uncovers hidden operational costs by tracking inventory handling, materials used, product storage and transportation activities.

Mobile scanning – As a Motorola Partner Select ISV Program member, 3PL Central offers barcode scanning functionality that connects to Motorola handheld devices. For users without Motorola devices, 3PL Central can recommended compatible hardware partners.

Inventory Management, Tracking & Reporting

E-commerce integration – 3PL Central’s e-commerce features can easily integrate with warehouse systems such as e-commerce shopping carts, business management platforms and internal accounting programs.

Electronic Data Interchange (EDI) integration – By supporting a variety of EDI file protocols, both third-party logistics companies and private warehouses can easily communicate with their customers, partners and retailers.

Small parcel shipping – The small parcel shipping application eliminates the need to manually handle addresses and tracking numbers in carrier systems. Instead, the small parcel shipping feature allows you to print shipping labels for carriers such as UPS, FedEx, DHL, Mail Innovation and USPS in real-time.
