EXEDY

EXEDY Globalparts Corporation

FIRST THINGS FIRST

Establish the reason for a replacement clutch being required.

If this is not due to normal usage, then the root cause of the condition must be established and corrected. These causes may include a slipping clutch, oil contamination, misalignment, faulty or incorrectly adjusted clutch release mechanism, faulty engine or gearbox mountings etc...

Already in the Future!

EXEDY Globalparts Corporation

www.exedyusa.com

1

1. All orders accepted by, and goods/products supplied by, EXEDY GLOBALPARTS CORPORATION, hereafter referred to as the Company, are subject to the following Terms and Conditions of Sale. Any exceptions and/or variations must be specifically agreed to in writing by both parties.
- 2a. Manufacturers' Names, Part Numbers, Symbols or any other references appearing in the Company's listing and/or on the Company Packaging, are used for reference purposes only and in no way indicate the goods/products are made by, for, and/or guaranteed by such manufacturers.
- 2b. No partnership, joint venture, or other such association will be deemed created by opening an account with the Company. Neither party is the agent of the other, and neither party shall represent itself as an agent, officer or principal of the other for any purpose, including, without limitation, entering into any commitment, agreement or other obligation. Purchasing product from the Company does not in any way imply that the customer is an appointed sole Distributor or an **exclusive Distributor of the Company's products**.
3. All data, applications and/or interchanges, contained in the Company's listing and catalog/publications electronic lookup systems have been compiled as carefully as possible from reliable and official sources of information available at the time of publishing and appears as a **general guide only**. The information contained is correct to the best of the Company's knowledge and belief. **However, the Company cannot, and will not, assume any responsibility for possible errors contained in the publications.** Correct selection of goods/products is the responsibility of the Distributor.
- 4a. Standard OEM replacement clutch kits are guaranteed for a period of twelve (12) months or 20,000 miles, whichever ever occurs first, against manufacturers defect. OEM Replacement clutch kits and Automatic Transmission kits used in performance applications are not covered by any warranty.
- 4b. For warranty information on sports and performance clutch products, please refer to EXEDY sports clutch catalog. Sports and performance clutch products do not carry a 12 month or 20,000 mile warranty.
- 4c. All goods/products supplied by the Company are warranted against faulty material and/or workmanship. Warranty does not apply if maltreatment, damage caused by collision or incorrect fitting exists. Warranty does not apply when the goods/products sold are fitted to a vehicle used for speed trials, racing, time trials, commercial and off road vehicles unless specified for that use in the Company's publications.
- 4d. When the Company's clutch covers, clutch discs, or bearings are repackaged with another manufacturer's parts all warranties are void.
- 4e. Standard clutch kits and/or clutch components fitted to modified vehicle and/or clutch components that have been modified to Heavy Duty Specifications and/or any other specification/non-original conversions; Clutch disc and/or clutch disc friction material that have been altered are not covered by any warranty issued by the Company.
- 4f. Standard clutch kits claims will be rejected where clutch kits and/or clutch components have been fitted to incorrect or unlisted applications. Flywheel must be resurfaced/machined to OEM specifications before new clutch kit is fitted otherwise warranty will be void.
- 4g. All clutch kits and components must be installed per OEM factory service procedures.

***WARNING:** Do not use EXEDY clutch products in any situation where engine RPM's may exceed manufacturer's specifications. Pressure plate can explode unexpectedly causing serious injury or death to vehicle occupants and bystanders. Clutch cover and bell housing will not protect against exploding pressure plate. Refer to the Application Catalog for correct fitting. For sports and performance applications, please refer to the EXEDY Sports and Performance Publication.

CLAIM/WARRANTY PROCEDURES

- 5a. Any goods/products deemed by the Distributor to be faulty must contact our **Technical Support Department** at **800-346-6091** or by email: **TechSupport@exedyusa.com** to obtain an Inspection Request Form. A completed Inspection Request Form shall be returned for review, if approved a RGA number will be issued. The goods/products being returned must be sent to us **freight prepaid**.
- 5b. No Claim Credit will be issued until the said goods/products have been tested and deemed faulty by the Company.
- 5c. The Company will not pay any claim for goods/products repaired by the Customer and/or claims sight unseen.
- 5d. It is the responsibility of the Company's Distributor to advise their customer on all aspects of this warranty and/or warranty procedures on any claim.
- 5e. No Claim/Warranty will be given for NON-Kit OE replacement components and/or hydraulic components.

RETURN FOR CREDIT PROCEDURE

- 6a. Goods/Products and packaging must be in resalable condition.
- 6b. Freight must be prepaid by Distributor.
- 6c. All returns must be pre-approved by Company, any returns that arrive without pre-approval will be returned to sender.
- 6d. To obtain a RGA number, contact our **Returns Department** at **800-346-6091** or **returns@exedyusa.com**.
- 6e. A reason for the return of goods/products must be indicated at the time of return and be approved by the Company in advance. (Refer to 5a).
- 6f. Stock Adjustments/Returns: Will be at the discretion of the Company.
- 6g. Returns will be subject to 20% restock fee.
- 6h. All special ordered goods/products will not be accepted back for credit.
- 6i. Returns will not be accepted after thirty (30) days from issue date of RGA (Return Goods Authorization).

FREIGHT/INSURANCE

Only applicable for EXEDY Globalparts Corporation Authorized Distributors

- 7a. Standard Clutch Kit orders over \$1,000 (US Dollars) will be shipped freight prepaid within the Continental United States. Component orders over \$7,500 (US Dollars) will be shipped freight prepaid within the Continental United States. **NOTE:** Sports and performance kits and products are excluded. (No free shipping on sports products) Please refer to special conditions if negotiated below. Drop shipment requests for orders under \$300 (US Dollars) there will be an additional service fee applied. Freight will also be added.
- 7b. Insurance is not included in the freight charge. Insurance, if required, is the responsibility of the Distributor and must be arranged prior to dispatch of goods/products.
- 7c. Distributors wishing to request another freight company and/or method, other than the one used by the Company, must make arrangements prior to dispatch of goods/products. All costs incurred and insurance, if required, are the responsibility of the Distributor.
- 7d. Any claims for damaged goods/products or shortages in transit must be filed with the carrier at the time of delivery. All claims listed must be identified on the delivery receipt. Any claim not identified on delivery receipt will not be the responsibility of the Company. Any claims of damaged/shortage must be reported to the Company within 2 business days (after receipt of delivery), the signed delivery receipt showing the damage/shortage must accompany this claim.

COPYRIGHT/TRADEMARK INFRINGEMENT

- 8a. "EXEDY" and/or its Logos are Registered Trademarks with the United States Patent & Trademark Office, (Registration No. 76482354, WIPO No. 1046491).
- 8b. Trademark infringement is a serious violation of Federal law, subject to severe civil penalties; including, without limitation, injunctive relief, destruction of the infringing products, recovery of the infringer's profits and any actual damages caused by the infringement.
- 8c. Distributor is not allowed to use EXEDY" and/or its Logos, without expressed written consent.

Please draw our attention to any errors, omissions and anomalies. It is the responsibility of the Company's Distributor to advise their staff and customers of the above terms and conditions of sales.

All Terms and Conditions stated above are effective October 1, 2014 and supersede any other Terms and Conditions. EXEDY reserves the right to update or amend these Terms and Conditions at any time without prior notice.

Annual Sales Growth

The leading company of drivetrain components

EXEDY is a general drivetrain systems manufacturer with a main focus on automotive clutches and torque converters, managing from development to production. With the core technologies specializing in friction, vibration and fluid. EXEDY's products have been highly recognized by car manufacturers around the world and widely adopted as a genuine brand. EXEDY continues to hold a large share in both domestic and international markets, establishing 42 group companies covering 23 countries worldwide.

Core Technology

Friction

Development of the highest quality friction material that can demonstrate the world's top level performance.

VIBRATION

Development of the most efficient Damper that can absorb vibration from the engine.

FLUID DYNAMICS

Development of the most efficient Torque Converter grounded on the analysis of the fluid dynamics inside.

AT products

EXEDY manufactures Torque Converters and Clutch Packs, providing today's drivers with a smooth and comfortable ride. The Super Squashed Torque Converter with high efficiency grounded on Hydro-dynamics has been marking great advances in the American and Chinese automotive markets.

Super Squashed Torque Converter

Lock-up Damper

Clutch Pack

Paper Disc

Clutch for Passenger Vehicles

Clutch for Large-sized Commercial-Vehicles

Sports Clutch

MT products

The EXEDY group companies manufacture clutch covers and clutch disc assemblies around the world. EXEDY also develops dampers with high efficient noise/vibration control and high performance motor sports clutches.

TS products

EXEDY supplies uncompromising high quality products with virtually made-to-order, multi-item, small-sized production. EXEDY's power shift transmission for construction and industrial vehicles powerfully support Japanese key industries.

Power Shift Transmission

Retarder

Motorcycle products

EXEDY manufactures motorcycle clutches in the expanding markets of Southeast Asia. Utilizing the expertise accumulated in automotive clutches, EXEDY group companies in the region produce and supply Wet-type Multi-Plate Clutches and One-Way Clutches for Motorcycles.

Diaphragm Spring Type Wet Multiplate Clutch

Coil Spring Type Wet Multiplate Clutch

Dry type centrifugal clutch with pulley

Wet Centrifugal Clutch

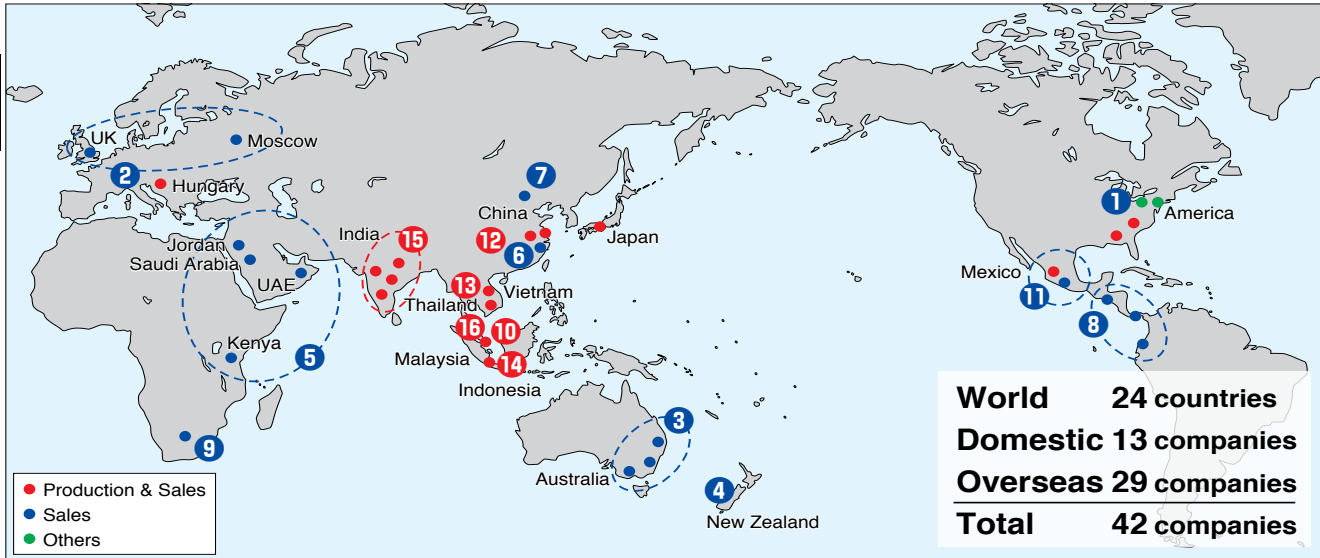

One-Way Clutch

GM Supplier Award for Quality in 2014

Daimler Supplier Award 2008

Best Supplier Power Train

Dr. Dieter Zetsche, Chairman & Mr. Haruo Shimizu

14 companies

Supplier of the Year 2009

HYUNDAI KIA MOTORS
 Award of Appreciation

① Check for Clutch Disc Appearance

Be sure to handle the clutch carefully and wear clean cotton work globes. Check the clutch disc that is being installed to confirm that the facing is not chipped and there are no scratches on the spline hub teeth.

② Check for the Movement of Clutch

If no problem is found, fit the clutch disc onto the transmission's top shaft and confirm that it moves smoothly.

③ Apply the Grease to Spline Hub Teeth

After confirming that the clutch disc moves smoothly, remove it from the top shaft and use brush to apply the grease to spline hub teeth.

④ Apply the Grease to Top Shaft

Also, apply the grease to the top shaft teeth.

⑤ Remove Excess Grease

Fit the clutch disc back onto the top shaft and wipe away the excess grease. Excess grease could fly off and cause a juddering noise or slipping problems.

⑥ Check for Clutch Cover Appearance

Confirm there are no scratches or other defects on the friction surfaces of the pressure plate. If there are no problems, use a cleaner to de-grease the pressure plate friction's surfaces.

⑦ Installing to Fly Wheel

When installing the clutch, use an alignment tool to settle the clutch disc. Align the clutch cover with the flywheel's down pins, and temporarily tighten at least three diagonally opposed bolt.

⑧ Tighten Diagonally

Before finishing tightening the bolt, re-confirm that the clutch disc is centered. Now, tighten the bolt to the specified torque, alternating between diagonally opposed positions. Do not use impact wrench to tighten the bolt. Differences on diaphragm's height can cause juddering noise or other problems.

⑨ Remove Temporary Tightening Part

Clutch cover for middle size and larger vehicles are fitted with red bolts, red wires and red plates for temporary assembly. After installing the clutch, be sure to remove them.
※Check p○,○ for your information.

⑩ Reinstalling the Transmission

When reassembling the transmission, position it so that crankshaft and the top shaft are aligned in straight line. While aligning the teeth, carefully insert the top shaft all the way into the clutch disc spline in a single motion.

Stopping midway or forcing the top shaft in could dent spline hub teeth and result in faulty disengagement.

After confirming that the clutch housing is fully contacted with engine's mounting surfaces, tighten the housing mounting bolt to the specified torque alternating between diagonally opposed positions.

Do not use impact wrench to tighten the bolts as the top shaft could be shifted off center.

Correct handling and installation will prevent malfunction of clutch.

1. Function of transmitting the torque from the engine to the drivetrain.
2. Smoothly deliver the power from the engine to enable smooth vehicle movement.
3. Perform quietly and to reduce drive-related vibration.
4. Protect the drivetrain when given the inappropriate use. Given the situation, the Exedy clutch will fail when given the inappropriate use in turn to protect the rest of the drivetrain, similar to the function of an electric fuse.

CLUTCH DISENGAGED

CLUTCH ENGAGED

Structure of the drivetrain and the clutch

PUSH TYPE MANUAL CLUTCH ASSEMBLY

When the clutch pedal is pressed, a cable or hydraulic piston pushes on the release fork, which presses the throw-out bearing against the middle of the diaphragm spring. With the spring pushed, the clutch disc is then disconnected from the rotating flywheel that is attached to the engine. When the pedal is released, the disc will engage contact with the flywheel and transmit the torque from the engine to the rest of the drivetrain.

CLUTCH COVER

CLUTCH DISC

There are functionaly 8 different types in clutch cover.

1

LB LEVER BOSS TYPE

Pressure Plate and Cover are directly clawed and fixed.

DT DIAPHRAGM TAG TYPE

Diaphragm type and Pressure Plate and Cover are fixed by Strap Plate. Cover holds Diaphragm Spring.

LS LEVER STRAP TYPE

Pressure Plate and Cover are fixed by the strap plate.

PL PULL TYPE

Release Bearing is fixed on the edge of Diaphragm Spring and pull the Release Bearing.

DB DIAPHRAGM BOSS TYPE

Diaphragm type and Pressure Plate and Cover are fixed directly.

TW TWIN PLATE TYPE

Two Discs are used in one cover.

DS DIAPHRAGM STRAP TYPE

Diaphragm type and Pressure Plate and Cover are fixed by strap plate. Diaphragm and Cover are fixed by Stud Pins.

DU UNITY TYPE

Basically the similar design as DT and, specially designed to utilize common parts.

Classification to Friction material

ORGANIC DISC

Clutch disc assembly with asbestos free organic facing

METAL DISC

Clutch disc assembly with metallic facing

COMBINATION DISC

Clutch disc assembly with combination of asbestos free organic facing and metallic facing

Classification to damper type

SOLID TYPE

Clutch disc assembly with no damper

NORMAL TYPE

Clutch disc assembly with damper

SILENT TYPE

Clutch disc assembly with damper and pre-damper

WAD TYPE

Clutch disc assembly with Wide Angle Damper to absorb noise and vibration more efficiently

Various benches have been developed by EXEDY. Tests far too dangerous to be conducted in a vehicle are reproduced on these test benches with the reliability of products being evaluated.

1

Low Inertia/High Torque Dynamometer

Allows for new performance testing methods. Used for evaluations from the standpoint of the vehicle, can reproduce conditions of an actual engine.

Evaluation of damper performance for a moving vehicle. Damper evaluation includes rotational fluctuations similar to an actual car.

Cranking evaluation at engine start-up. Product noise and vibration can be evaluated during cranking.

Evaluation is possible of item such as:

- Damper Attenuation Rate
- Rattling noise when the engine is idling
- Performance when starting up from a stop
- Acceleration shock
- Engine start-up
- Low temperature Automatic Transmission Fluid tests at -30C

Burst Tester

Evaluation of rotational intensity at extreme high-speed tester.

Release Durability Tester

Evaluation of the intensity and fatigue of a diaphragm spring.

High Speed Full Sized Tester

Evaluation of friction characteristic and durability of clutch disc.

Torsional Durability Tester

Evaluation of the durability of clutch disc damper.

SECTION 5
CLUTCH
INSTALLATION
INSTRUCTIONS

How to get it right the first time...

FITTING INSTRUCTIONS: INSTALLING YOUR NEW DAIKIN CLUTCH.

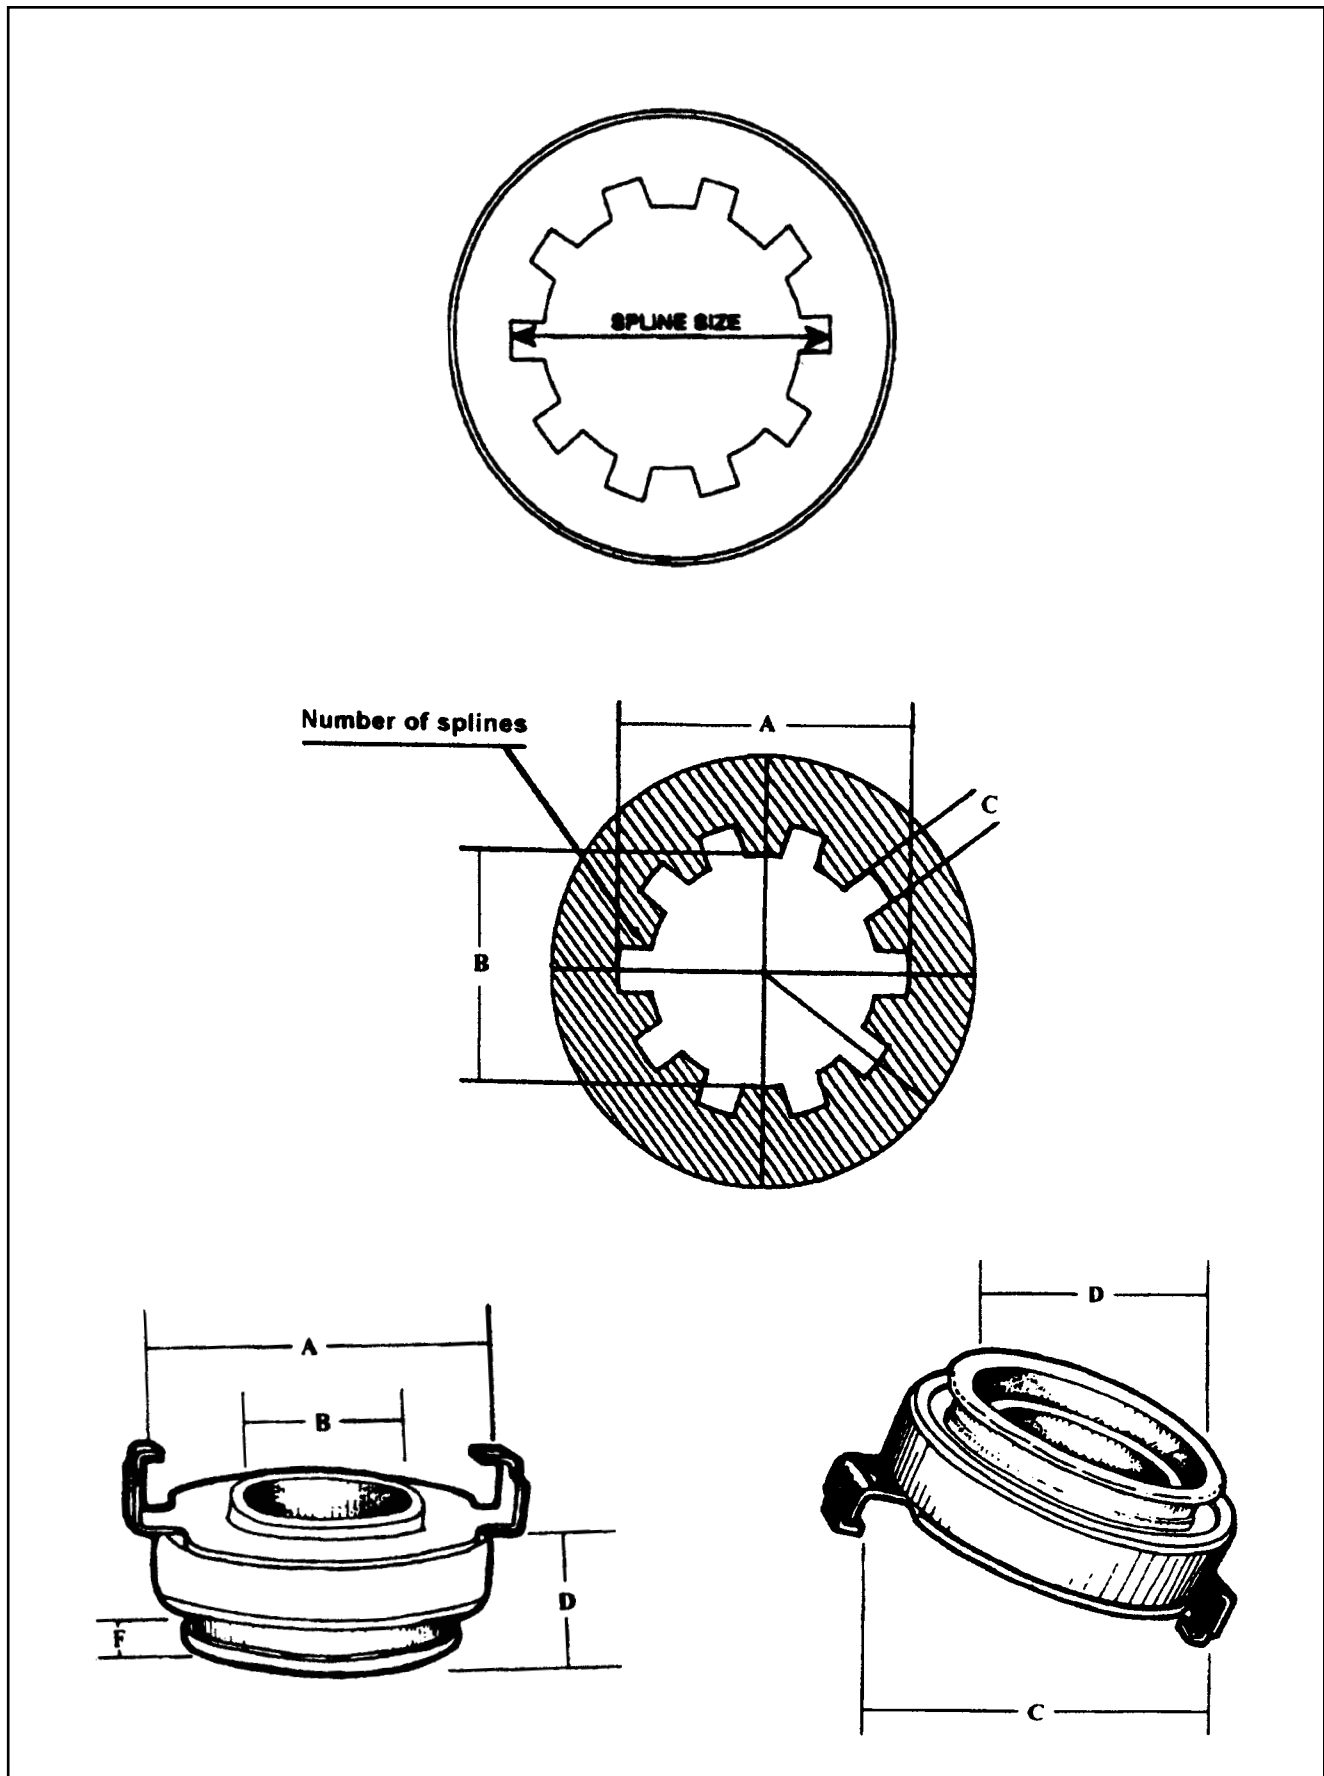

Failure to observe these instructions when fitting your Daikin Clutch will void any warranty.

1. *Getting it right the first time. It is vital to diagnose the cause of clutch malfunction before clutch replacement, i.e. check hydraulic system - bearing free travel - clutch cable, oil leaks and check for any signs of red dust when old clutch is being removed. Any or all of these problems must be corrected before installing a new clutch.*
2. Ensure clutch supplied is correct for the application. If you're unsure, consult your Daikin Clutch Catalogue or your supplier, as fitting a clutch to the wrong application will void the warranty.
3. Flywheel must be machined as shown below (Fig 2.) or warranty will be void and check spigot bearing or the pilot bush and replace if necessary. Please note pilot bush noises are more apparent when the engine and transmission systems are cold (i.e. in the mornings).
4. Before fitting, check the clutch for any shipping damage. Next clean the gear box main drive shaft splines, then check that clutch disc slides freely on the shaft. Lightly grease the shaft splines with high melting point grease. Always ensure bell housing is degreased and is free of any dust and that fibres from the worn clutch are removed. If the clutch is a large size pull type clutch check the ID of the bearing head for correct spline size before installation. Lack of lubrication/dry splines will cause failure to disengage gears and also cause clutch drag.
5. Check clutch release fork for cracks, check the clutch cable for stretch signs and check the release bearing guide tube for any wear. Always lightly grease the outside diameter of the tube. This will allow smooth sliding of the bearing carrier. Always check bearing on clutch release fork after installing the bearing on it. Move the fork forwards and backwards i.e. in both directions, to ensure bearing is secure and does not fall on any part (clutch fork or bell housing) before refitting gear box.
6. Place the clutch cover pressure plate assembly over the clutch disc, after checking that the disc is the right way around and the hub section of the disc does not fall on the casting of the clutch cover assembly or the flywheel. A suitable clutch aligning tool will ensure correct alignment, assist in ease of installation and avoid spline damage. (Burrs on splines are a major cause of difficult gear disengagement). Ensure pressure plate dowels are aligned to the cover. Tighten bolts in a diagonal pattern and never use air tools to install a clutch cover assembly. Torquing down bolts in an uneven pattern in some instances could cause the lever strut to dislodge itself from the pressure plate casting.
7. When the pressure plate has been torqued down securely to the flywheel, ensure that the diaphragm tips (in the case of a lever type cover assembly, the release lever tips) are in a parallel position (see Fig 3) and do not go over center of the parallel position.
8. Refit gear box, taking care not to bend the clutch disc. Never hang the gear box off the clutch disc or use any force to align gear box shaft.
9. Check all bell housing dowels are in correct position and tighten bell housing bolts. Ensure there is no dirt or foreign material between the mating surfaces of the engine and the bell housing.
10. Perform any clutch adjustments to vehicle manufacturer's specifications and always reset the clutch master cylinder push rod to obtain comfortable pedal release position (clutch taking up as close as possible to the floor prevents clutch shudder and in most cases preferred by vehicle drivers). Keep in mind that the diaphragm tip position has changed with the installation of the new clutch.
11. Always check the clutch cable if you are unable to obtain disengagement when a new clutch is fitted. Start off your checking process by replacing the cable. If it is a hydraulic clutch start by checking the clutch master cylinder and the clutch slave cylinder, ensuring there is no air in the system. This is essential to obtain maximum travel for disengagement.
12. Road test vehicle and never abuse a newly fitted clutch. Allow 750 mi break in and always adjust free travel on your new clutch at 750 mi and 1500 mi. Thereafter, adjust at every 7500mi.

5

WARNING: Do not use DAIKIN clutches in any situation where engine RPM's may exceed manufacturer's specifications - a pressure plate could explode unexpectedly causing serious injury or death to vehicle occupants and bystanders. Clutch cover and bell housing will not protect against exploding pressure plates. Refer to the Application Catalogue for correct fit.

NEW TECHNOLOGY DESIGN CLUTCH

STUDY BEFORE DISASSEMBLY

STUDY BEFORE INSTALLATION

PATENTS PENDING
 One for Pull Clutch
 Four for Release Bearing Mechanism

INSTALLATION AND SNAP-IN PROCESS

Install Bearing on to clutch fork, install transmission (G/Box) then the release fork must be pulled in the direction reverse to the release firmly. The bearing is then snapped in.

DISASSEMBLY

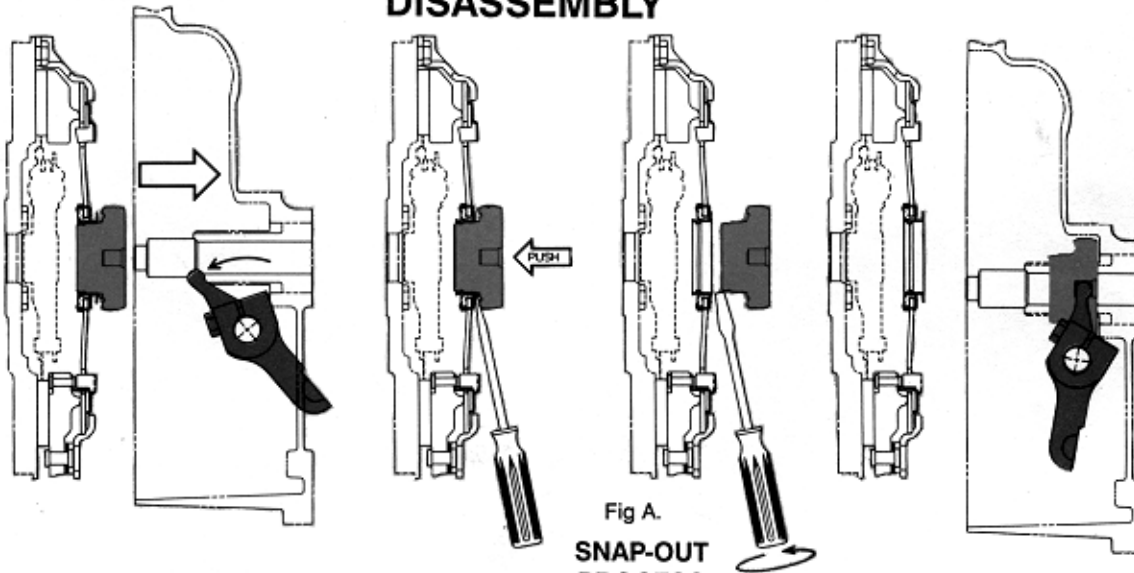

Fig A.
SNAP-OUT PROCESS

Move Bellhousing back approximately 30 to 40mm, insert screwdriver and twist as in figure A. Bearing will then snap out from clip mechanism.

5

BED IN PROCEDURE DRIVER EDUCATION TO BE FOLLOWED

IMPORTANT NOTICE

AFTER INSTALLATION OF THIS CLUTCH PLEASE NOTE DUE TO HIGH PERFORMANCE T5000 FRICTION MATERIAL BEING USED IN YOUR DISC YOU MAY ENCOUNTER SLIGHT CLUTCH SHUDDER AS WITH ANY CERAMETALLIC CLUTCH SYSTEM THERE WILL BE SOME COMPROMISE OF START UP DRIVEABILITY AS COMPARED TO A STOCK CLUTCH (CHATTER ON LIGHT THROTTLE, AT LOW RPM START UPS.)

THESE CHARACTERISTICS ARE GENERALLY ACCEPTABLE IN MODIFIED PERFORMANCE CARS. DRIVERS WHO CHOOSE CERAMETALLIC CLUTCHES MUST BE AWARE OF THIS.
