

Motorsport Technical School (MTS), Europe's premier institution for Motorsports Training, has launched its first U.S. campus in Indianapolis, bringing more than a decade of global experience to the American racing scene.

Founded in Monza (Italy), and responsible for training over 1,000 graduates now working in Formula 1, WEC, MotoGP, and IndyCar, MTS delivers a proven, high-performance curriculum built specifically for aspiring race mechanics and data acquisition technicians.

With hands-on training, real-world race involvement, and elite instructors from top-tier teams, MTS prepares students to step directly into professional motorsport operations.

"At MTS, we have great instructors that have a wealth of experience in Motorsport", said Rossella Manfrinato, MTS Italy and US Instructor, former racing driver, and mechanical engineer, "and the conditions and situations the students are put through are very much what they encounter in real life at a race track".

The U.S. motorsports industry is in constant need of highly skilled talent: not only drivers, but mechanics, engineers, and data technicians capable of making a competitive difference. MTS was created to fill this need.

The Indianapolis campus offers two primary tracks:

- **Race Car Mechanic Program**
- **Data Acquisition Technician Program**

Courses are delivered over 8 weekends (Friday to Sunday), making it ideal for students who are working full-time or enrolled in college. Unlike traditional programs, MTS delivers practical, hands-on training directly in pit settings, garages, and racetrack environments.

MTS students work on real race cars and train on real tracks. The curriculum includes live race-weekend work with Formula 4 or similar series, giving students direct exposure to pressure-driven environments. Students learn in small groups (12–30 students per course), working on real single-seaters and GT cars, with a 80%+ post-graduation employment rate.

“MTS has been around for nearly 2 decades in Italy, and they have been very successful at placing individuals in Motorsports”, said Brad Kettler, MTS US Instructor and Director of Operations-Engineering at Audi Sport customer racing, “this is because the school has a very hard focus on hands-on skills that prepare the students to fit right away in the world of Motorsport”.

RACE CAR MECHANIC PROGRAM:

- Suspension setup & geometry
- Vehicle dynamics
- Car transmission gears
- Pit stop preparation & teamwork
- Fastener torque strategy, tools & safety

DATA ACQUISITION TECHNICIAN PROGRAM

- In-depth analysis about Wintax, Atlas, AIM and Motec
- Data logging & analysis
- Electronics integration
- Trackside sessions

The decision to open the first U.S. campus in Indianapolis is no accident. With a deep local talent pool and proximity to teams like Andretti Global, Chip Ganassi Racing, and Arrow McLaren, the city is a natural hub for high-performance education.

MTS USA is currently **enrolling for its Fall 2025 session, starting August 22.** The program is ideal for:

- Aspiring race mechanics and data techs
- High school and/or trade school students interested in mechanics
- College students pursuing motorsport careers

- Career changers with technical backgrounds
- Motorsport enthusiasts

 Location: Indianapolis, IN (4007 Guion Lane, 46268)

 Format: 8-weekend modules

 Career Outcomes: Race teams, engineering firms, data tech, motorsport suppliers

Financial aid options and tuition plans are available.
