

Expedited, Expert Used Oil Analysis

Prevent Catastrophic Failures

Utilizing the same technology applied by Formula 1 teams, catastrophic failure can be prevented by early detection.

SPEEDiagnostix combines modern, analytical techniques with expedited processing to deliver valuable data in a timely manner. The data provided by SPEEDiagnostix allows you to make decisions based on data, not speculation.

In as soon as 3 days, know the health of the engine, transmission, or gear box, and it is cost effective. For as little as \$59.95 per sample, SPEEDiagnostix provides the ability to spot small problems before they become big problems. How much does it cost to replace parts damaged by a catastrophic failure? Are the bearings OK? Are the injectors leaking? Does the engine need to be rebuilt? Does the oil need to be changed? SPEEDiagnostix provides data that answers these questions and many more, and in a time frame that makes the data valuable. Saving just one engine pays for a lifetime of used oil analysis kits.

Expedited Processing:

Know the health of the oil and equipment quickly

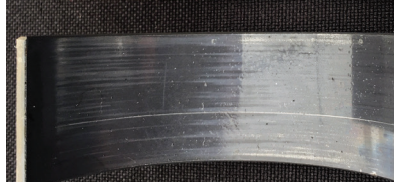

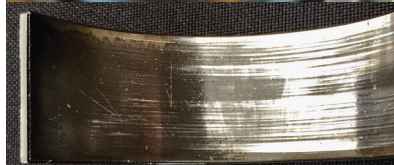

Wear Metal Analysis:

Know which parts are wearing

Trend Analysis:

Spot small problems before they become big problems

SPEEDiagnostix Kits

Standard Turnaround Kit - Part # 10001

Get results in 5 to 6 business days. This kit includes outbound & inbound priority shipping as well as all laboratory testing and reporting for just \$59.95.

Double Sample Kit - Part # 10003

This standard turnaround kit includes 2 sample bottles, one for a used oil sample and one for a sample of the new oil. The second bottle also allows for taking samples from multiple locations on the same unit or from multiple pieces of equipment. Again, the kit includes outbound & inbound priority shipping as well as all laboratory testing and reporting on both samples for a total of \$89.95.

Expedited Sample Kit - Part # 10002

Get results in 2 to 3 business days! Utilizing Priority Mail Express service and expedited laboratory processing, SPEEDiagnostix delivers results when time really matters. Like the other kits, all laboratory testing, reporting as well as outbound & inbound shipping is included in the \$99.95 kit price.

Every SPEEDiagnostix kit includes the following laboratory tests:

FTIR Spectroscopy:

An advanced infrared method that determines oil health and contamination levels.

RDE Elemental Spectroscopy:

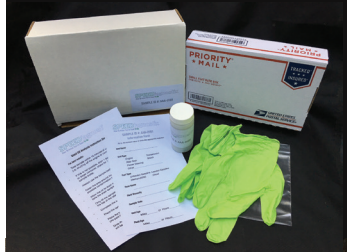

Analyzes the particles in the oil to determine the wear metal levels and additive concentrations.

Kinematic Viscosity:

Determines the viscosity grade of the oil sample.
